Least Total Precipitation: T at Pandale

Greatest one-day Precipitation: 7.58 inches on the 13th at Galveston WB C

Greatest Total Snowfall: 20.0 inches at Bravo

Deepest Snow on Ground: 12.0 inches on the 15th at Bunker Hill

REFERENCE NOTES

dditional information regarding the climate of Texas may be obtained by writing to the Weather Bureau State Climatologist, 3600 Manor Road, Austin 2, Texas, or o any Weather Bureau Office near you.

igures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

elayed data and corrections will be carried only in the June and December issues of this bulletin.

onthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

tations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

ivisions, as used in "Climatological Data" Table and on the maps, became effective with data for October 1956.

nless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches, and wind movement in miles. onthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

vaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

ong-term means for full-time stations (those shown in the Station Index as "U. S. Weather Bureau") are based on the period 1921-1950, adjusted to represent observations taken at the present location. Long-term means for all stations except full-time Weather Bureau stations are based on the period 1931-1955.

ater equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining easurements are taken from different points for successive observations; consequently, occasional drifting and other causes of local variability in the snowpack ay result in apparent inconsistencies in the record.

ntries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the seasonal snowfall table include snow and sleet. ntries of snow on ground include snow, sleet and ice.

ata in the "Monthly Extremes" Table; "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table; and snowfall in the "Snowfall and now on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. uring the summer months some observers take the observations on daylight saving time.

now on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and FAA Stations. For those stations snow on ground alues are at 0600 C.S.T.

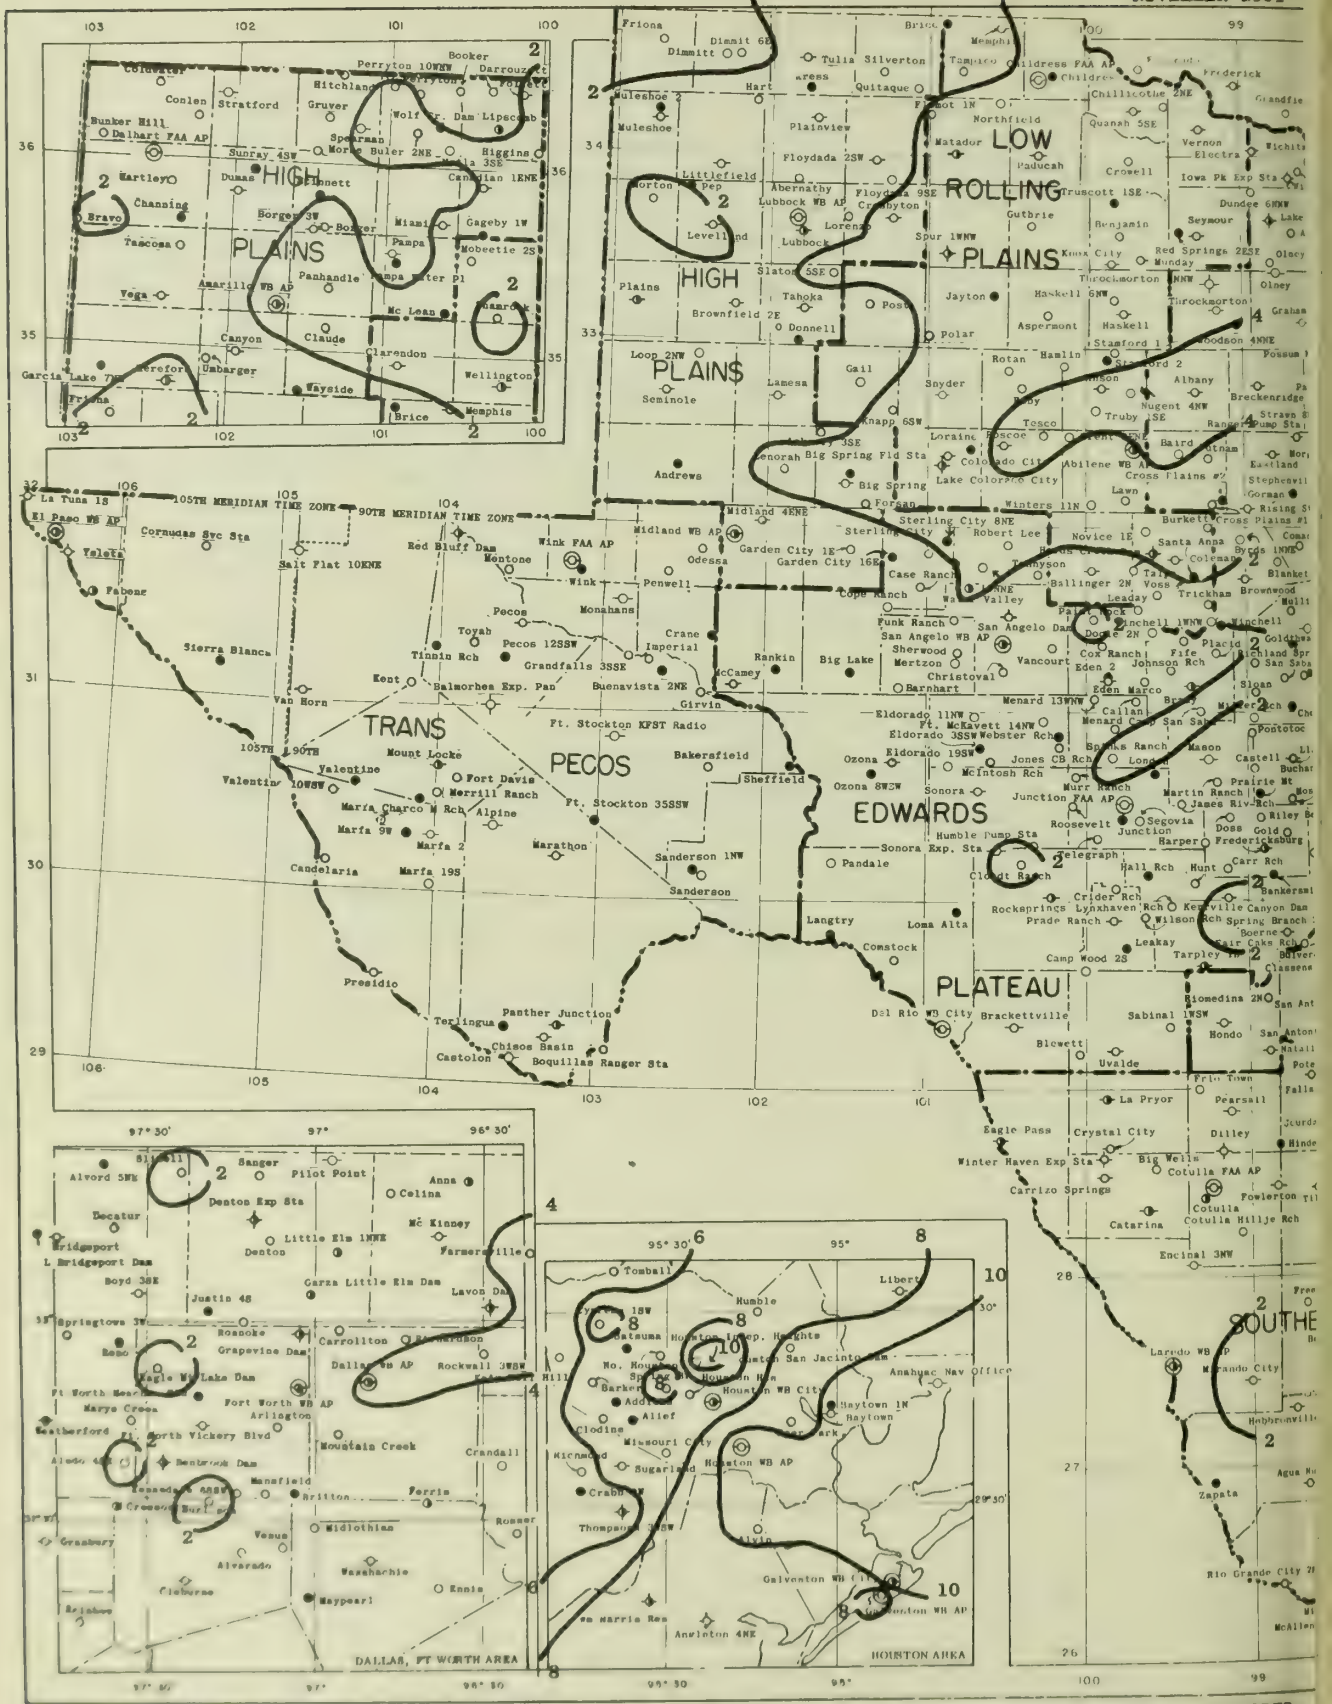
n the Station Index the letters C, H, and J in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C	Recording Rain Gage Station. Hourly precipitation values are processed for special purposes. and are published later in "Hourly Precipitation Data" Bulletin.
H	"Snowfall and Snow on Ground" Table. Omission of data in any month indicates no snowfall and/or snow on ground in that month.
J	"Supplemental Data" Table.

OTHER REFERENCE NOTES

	No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.
	Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.
-	No record in the "Supplemental Data" Table; "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; and the Station Index.
+	And also on an earlier date or dates.
*	Amount included in following measurement, time distribution unknown.
¶	Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
D	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.
R	Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
SS	This entry in time of observation column in Station Index means observation made near sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.

neral weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA-NATIONAL SUMMARY, and ORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C.



nformation concerning the history of changes in locations, elevations, exposure, etc., of substations through 1955 may be found in the publication "Substation istory" for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C. for $1.00. milar information for regular Weather Bureau stations may be found in the latest annual issues of Local Climatological Data, obtained as indicated above, price 5 cents.

bscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should e made payable to the Superintendent of Documents. Remittance and correspondence regarding subscriptions should be sent to the Superintendent of Documents, overnment Printing Office, Washington 25, D. C.

MAX AND MIN IN DAILY EVAPORATION TABLE REFER TO EXTREMES OF TEMPERATURE OF WATER IN PAN AS RECORDED DURING THE 24 HOURS ENDING AT TIME OF OBSERVATION.
(A) EVAPORATION MEASURED IN A SUNKEN SCREENED PAN OF 24-INCH DIAMETER.
(F) ALUMINUM (ONE-FOURTH INCH THICK) EVAPORATION PAN.

MONTHLY EXTREMES

Highest Temperature: 89° on the 5th at Carrizo Springs

Lowest Temperature: -12° on the 12th at Dalhart FAA Airport

Greatest Total Precipitation: 10.17 inches at Neuville

Least Total Precipitation: 0.00 at Several Stations

Greatest one-day Precipitation: 3.02 inches on the 10th at Alto 5 SSW

Greatest Total Snowfall: 4.0 inches at Two Stations

Deepest Snow on Ground: 2 inches on the 13+ at Eight Stations

See reference notes following Station Index

(A) EVAPORATION MEASURED IN A SUNKEN SCREENED PAN OF 24-INCH DIAMETER.

See reference notes following Station Index.

REFERENCE NOTES

Additional information regarding the climate of Texas may be obtained by writing to the Weather Bureau State Climatologist, 3600 Manor Road, Austin 2, Texas, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table and on the maps, became effective with data for October 1956.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches, and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Long-term means for full-time stations (those shown in the Station Index as "U. S. Weather Bureau") are based on the period 1921-1950, adjusted to represent observations taken at the present location. Long-term means for all stations except full-time Weather Bureau stations are based on the period 1931-1955.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently, occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the seasonal snowfall table include snow and sleet. Entries of snow on ground include snow, sleet and ice.

Data in the "Monthly Extremes" Table; "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table; and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time.

Snow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and FAA Stations. For those stations snow on ground values are at 0600 C.S.T.

In the Station Index the letters C, H, and J in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C	Recording Rain Gage Station. Hourly precipitation values are processed for special purposes, and are published later in "Hourly Precipitation Data" Bulletin.
H	"Snowfall and Snow on Ground" Table. Omission of data in any month indicates no snowfall and/or snow on ground in that month.
J	"Supplemental Data" Table.

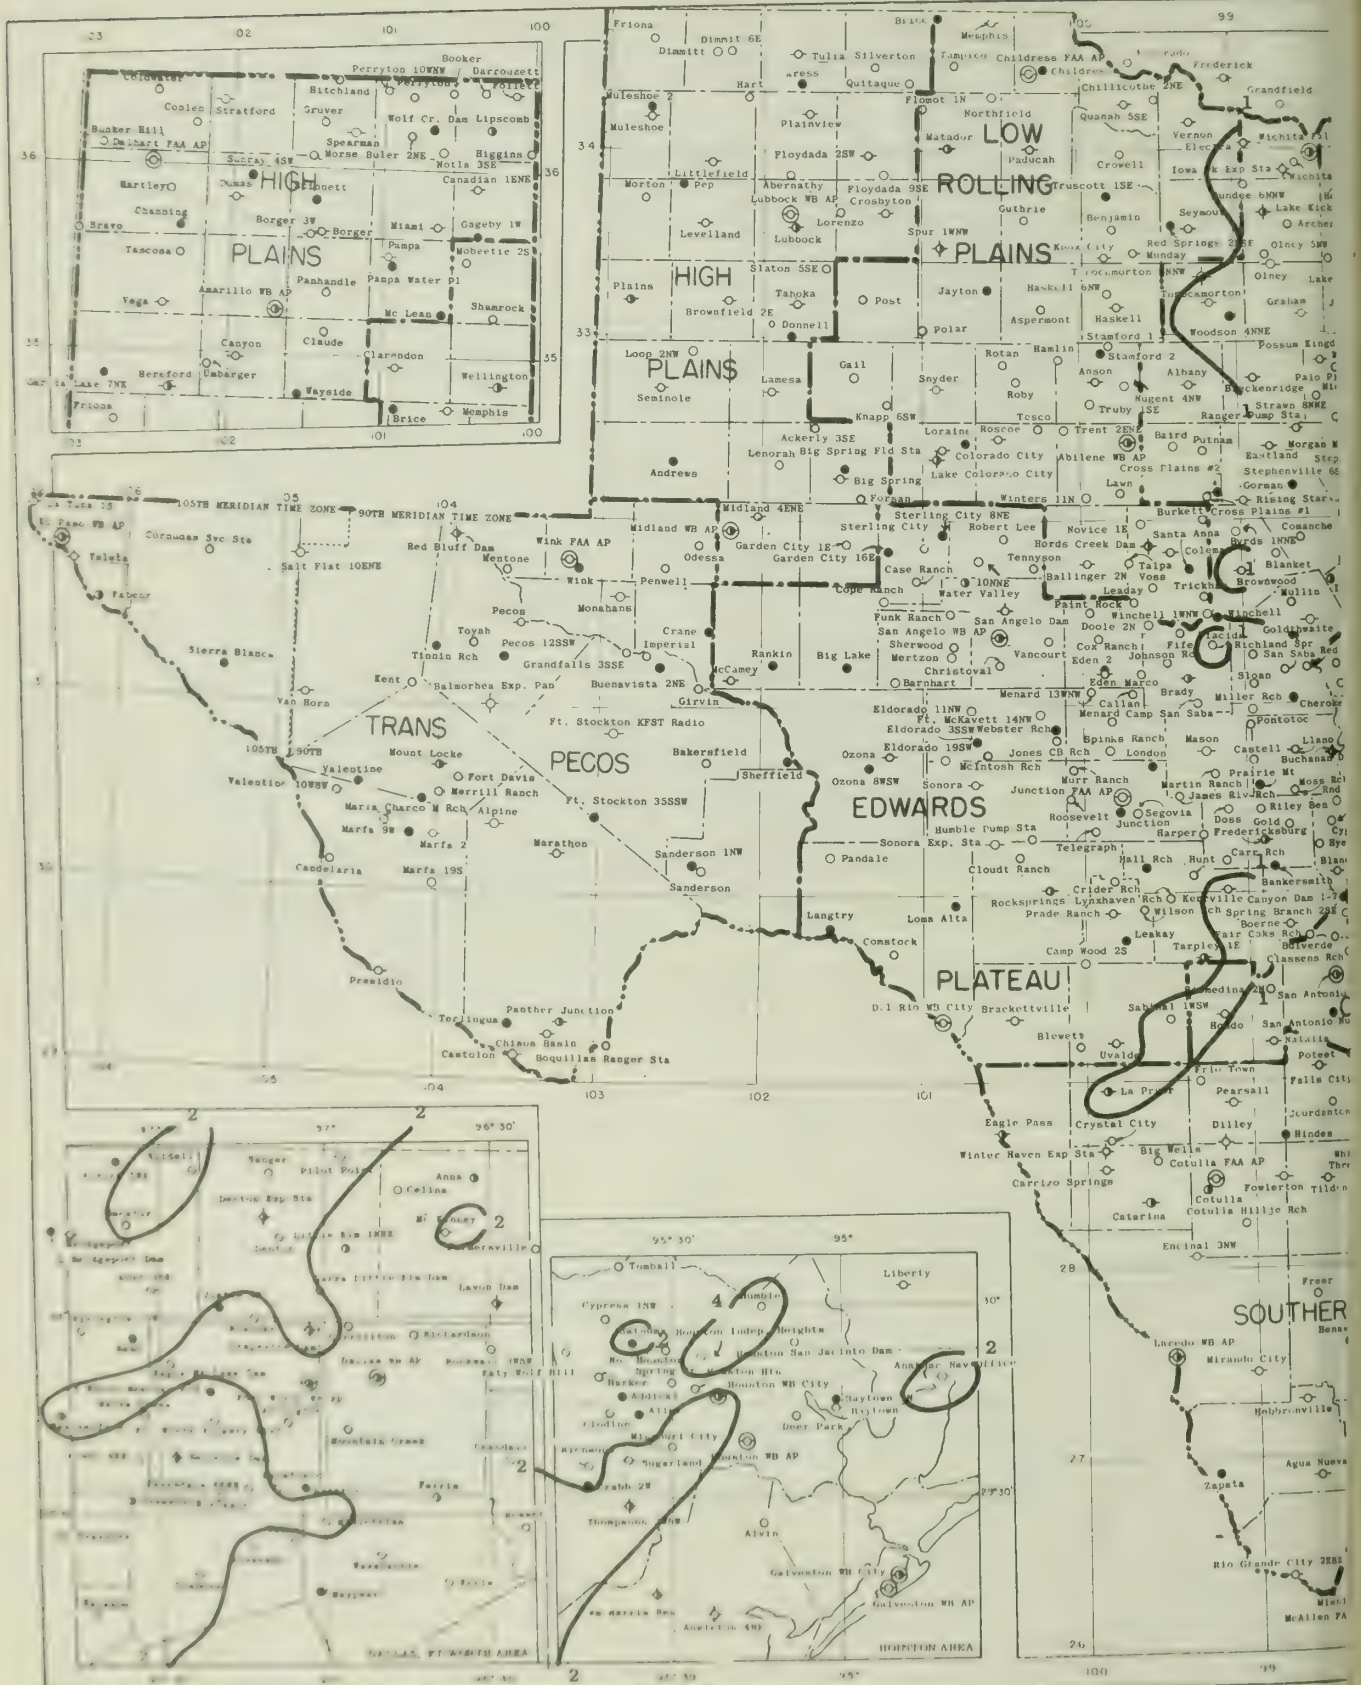
OTHER REFERENCE NOTES

	No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.
	Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.
--	No record in the "Supplemental Data" Table; "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; and the Station Index.
+	And also on an earlier date or dates.
'	Amount included in following measurement, time distribution unknown.
#	Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
D	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.
R	Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
SS	This entry in time of observation column in Station Index means observation made near sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.

General weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA-NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C.

Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1955 may be found in the publication "Substation History" for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C. for $1.00. Similar information for regular Weather Bureau stations may be found in the latest annual issues of Local Climatological Data, obtained as indicated above, price 15 cents.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittance and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.



USCOMM-WB-ASHEVILLE---2-6-62---1575

CORRECTIONS

DECEMBER 1953 THROUGH JUNE 1961:	BEAUMONT EXPERIMENT FARM, Evaporation and Wind Table, Evaporation measured in a sunken screened pan of 24-inch diameter.
JANUARY 1961 THROUGH SEPTEMBER 1961:	LOOP 2 NW, Daily Precipitation Table, Delete all Data.
JANUARY 1961 THROUGH OCTOBER 1961:	CANYON DAM NO. 7, Station Index, Station number should be 1438 instead of 1437.
APRIL 1961:	BALMORHEA EXP PAN, Climatological Data Table, Delayed Data in June 1961 bulletin, Greatest Day Precipitation should be .00.
APRIL 1961:	SONORA EXP STA, Climatological Data Table, Delayed Date in June 1961 bulletin, Greatest Day Precipitation should be .00.
MAY 1961:	ALICE, Climatological Data Table, Delete Lowest Temperature and Date.
MAY 1961:	LAKE COLORADO CITY, Climatological Data Table, Date of Lowest Temperature should be 3+.
JULY 1961:	ALPINE, Climatological Data Table, Highest Temperature and Date should be 92 on the 22+, Lowest Temperature and Date 54 on the 11th, No. of Days Max. Temperature 90° or above 6, 32° or below 0, Min. Temperature 32° or below 0, and 0° or below 0.
JULY 1961:	BORGER, Climatological Data Table, Average Maximum Temperature, Average Minimum Temperature, and Average Temperature columns should show M.

TOTAL PRECIPITATION

DECEMBER 1961

ISOLINES ARE DRAWN THROUGH POINTS OF APPROXIMATELY EQUAL VALUES. HOURLY PRECIPITATION DATA FROM RECORDER STATIONS WILL BE AVAILABLE IN THE PUBLICATION "HOURLY PRECIPITATION DATA."

TOTAL PRECIPITATION

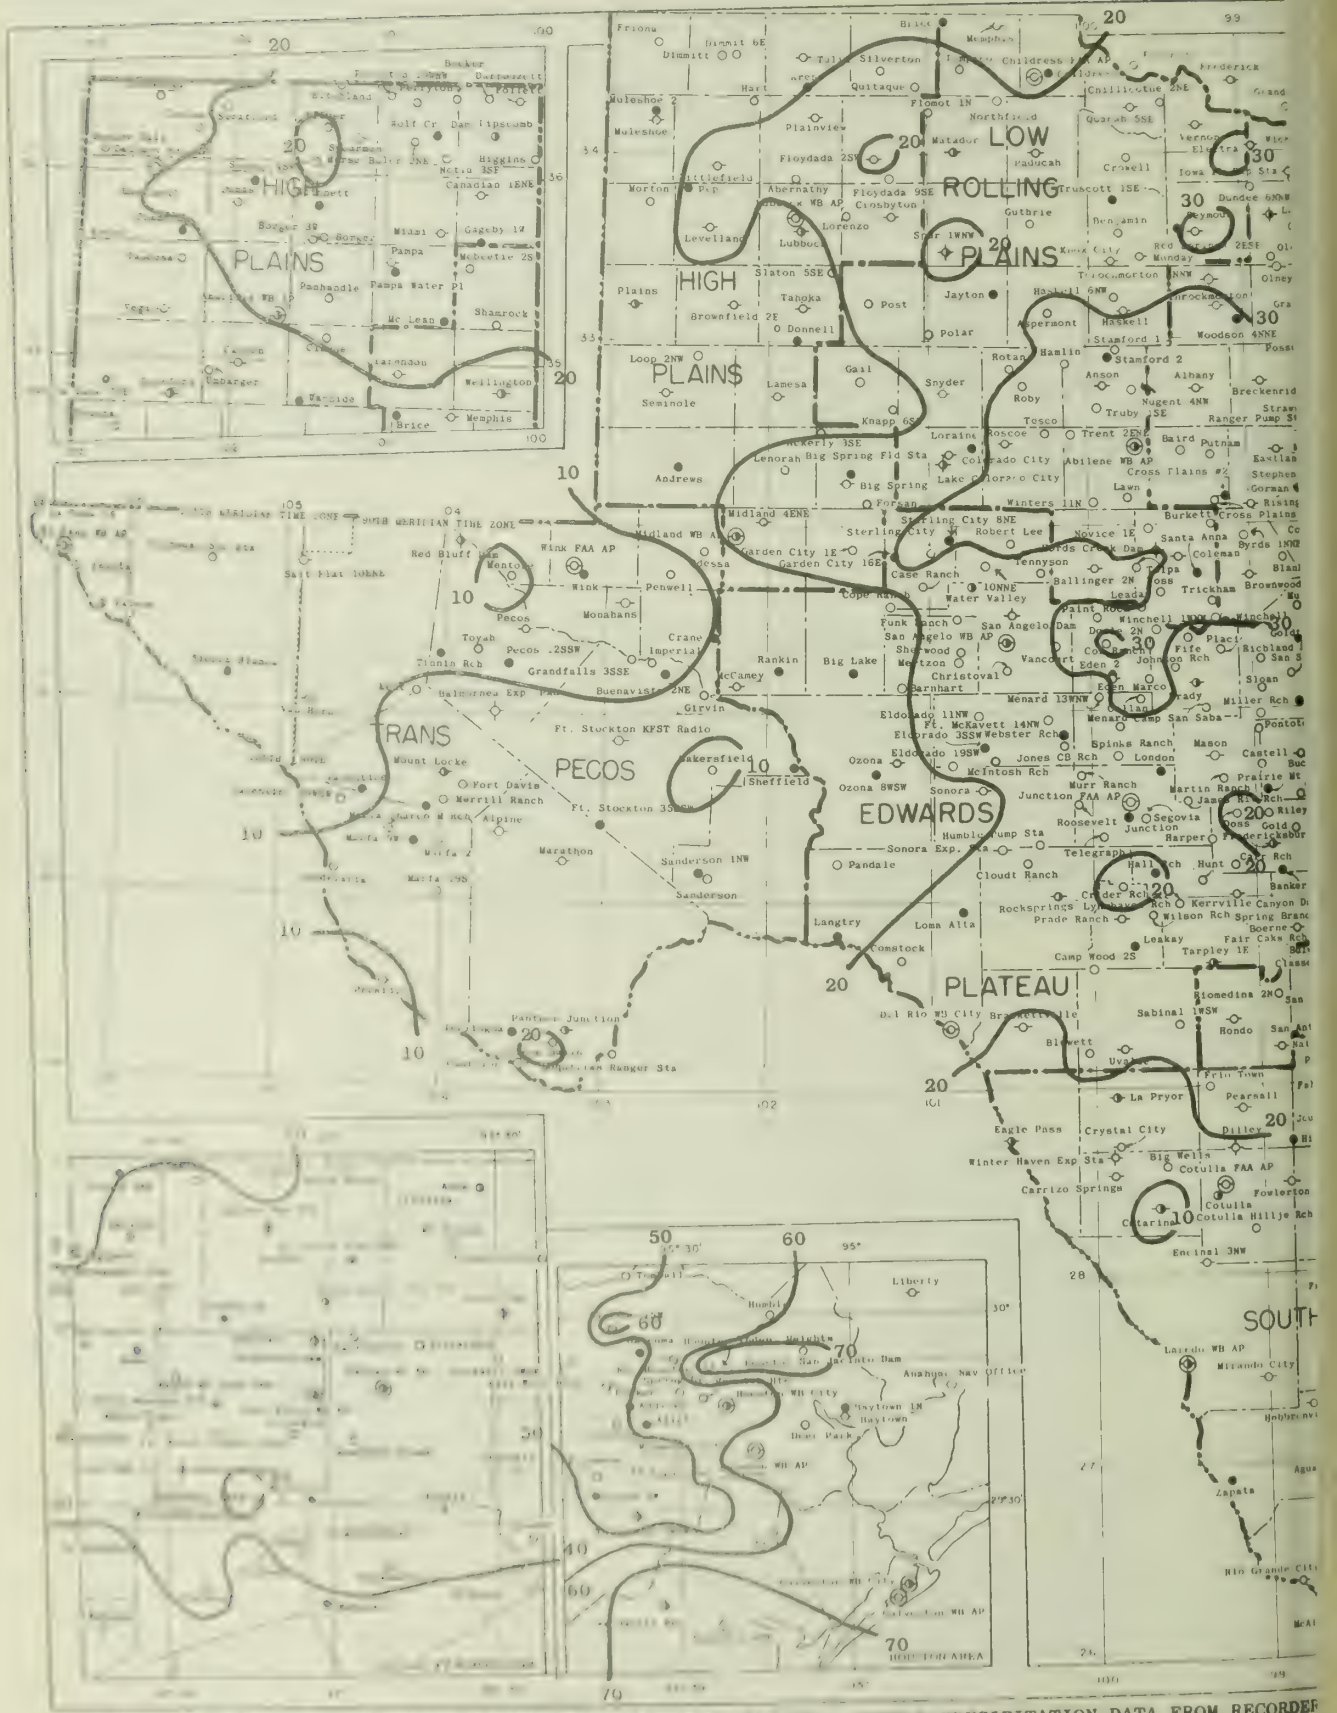
	Deficit								

ø TOTAL PRECIPITATION SINCE PREVIOUS SOIL MOISTURE MEASUREMENT.
NOTE: NEGATIVE AVAILABLE MOISTURE INDICATES AMOUNT BELOW WILTING POINT. NEGATIVE DEFICIT INDICATES AMOUNT OF GRAVITATIONAL WATER PRESENT, i.e. AMOUNT THAT THE MOISTURE PRESENT EXCEEDS FIELD CAPACITY.
(a) DATA ARE FROM WHEAT PLOTS HARVESTED 6/20/60. PRECIPITATION SINCE HARVEST, 23.08.
(b) DATA ARE FROM WHEAT PLOTS HARVESTED 6/28/61. PRECIPITATION FROM 6/28/61 TO 7/26/61, 2.98 INCHES.



DESCRIPTION OF SOIL MOISTURE SITES

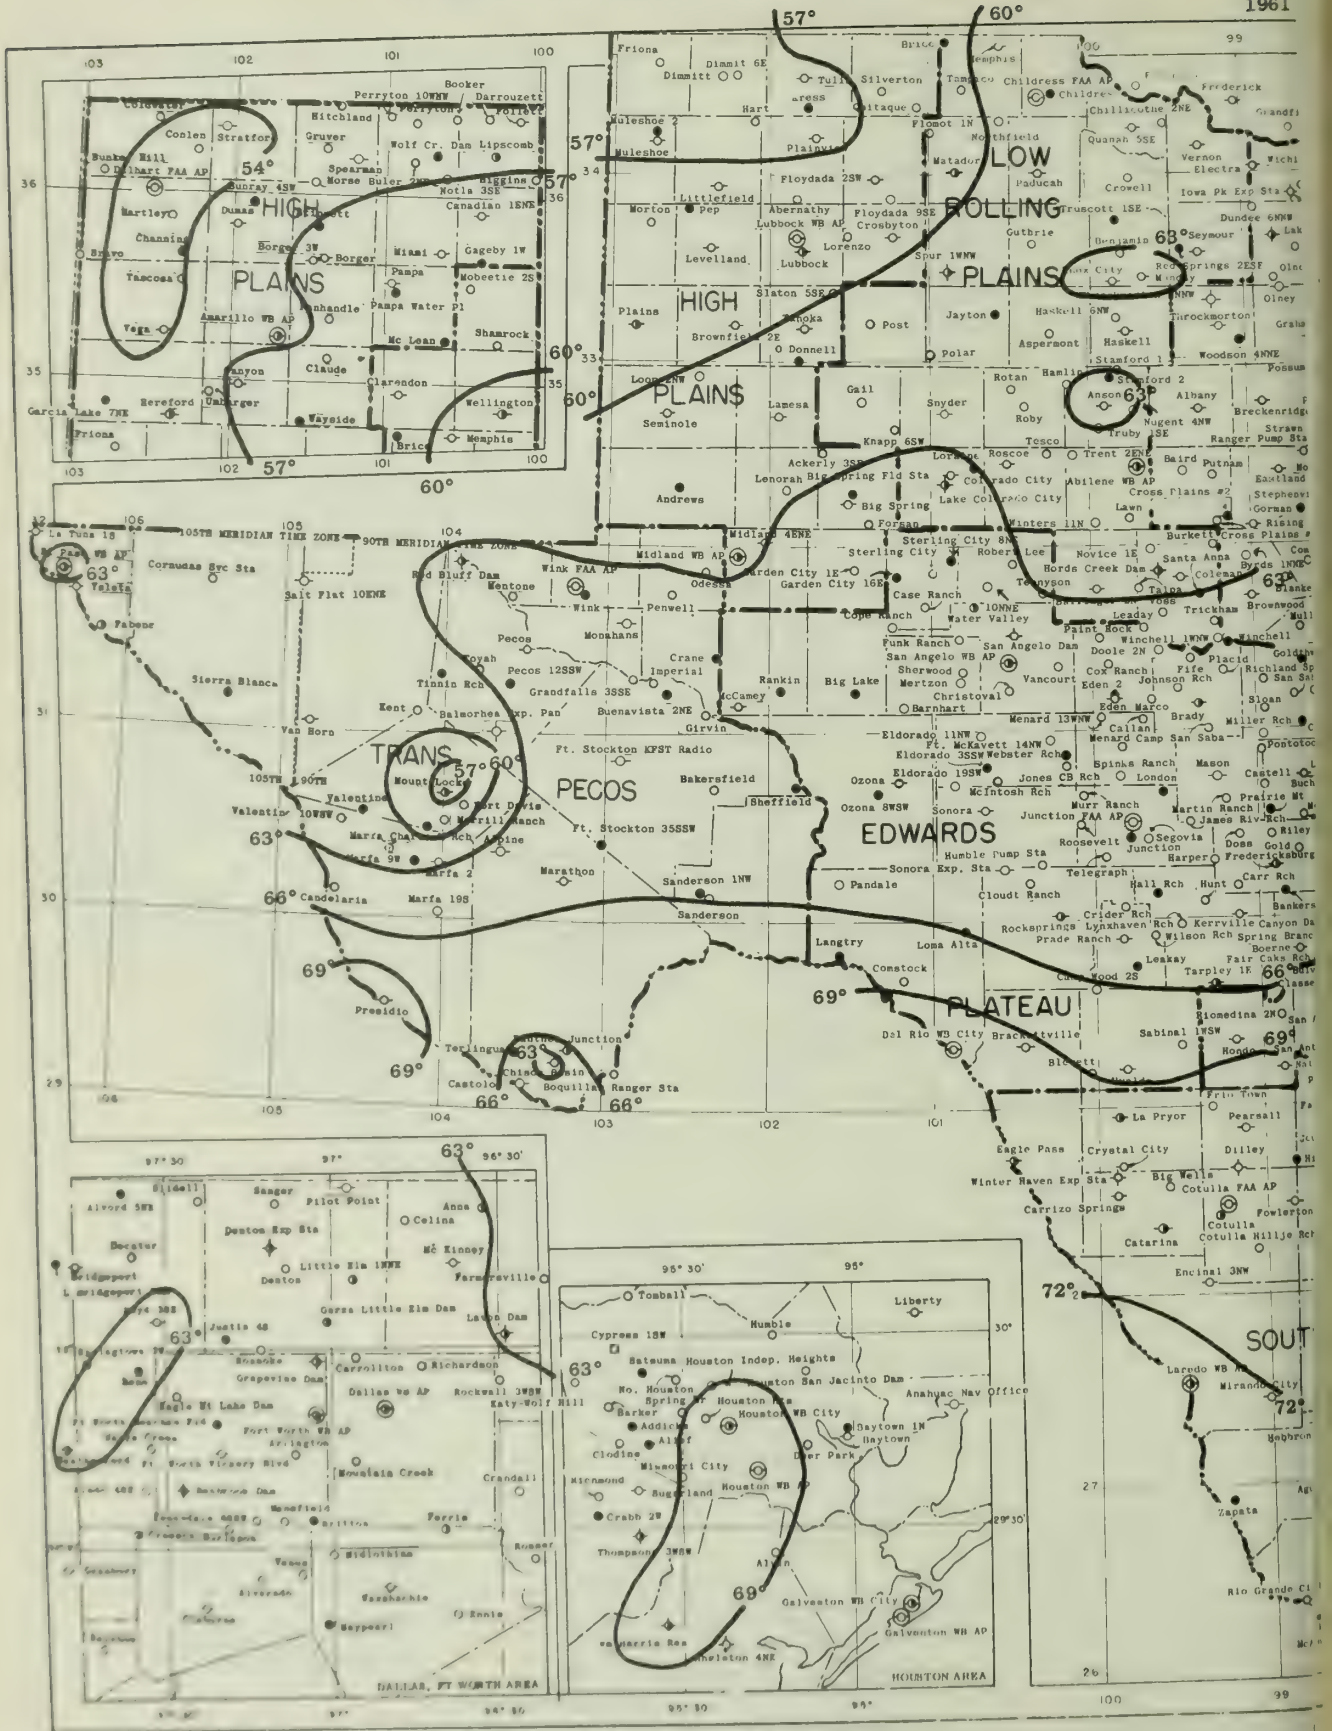
Location	Soil		Slope		Method of Measurement	Field Capacity (inches) for Depth Increments Reported						Remarks
	Type	Cover	Percent	Direction (facing)		Top Layer	2nd Layer	3rd Layer	4th Layer	5th Layer	6th Layer	
SOUTHWESTERN GREAT PLAINS FIELD STATION, BUSHLAND, TEXAS. (See remarks No. 2 & 3).	Pullman Clay Loam. (A deep fine textured, slowly permeable soil). (See remarks No. 1).	Wheat stubble utilizing minimum stubble mulch tillage to control weed growth.	0-1	Southeast	Mechanical sampling gravimetric determinations of moisture utilizing a power driven "viehmeyer" type tube with a .75" tip. (See remark No. 4).	2.0	2.3	4.6	4.1	3.7	3.4	Cooperator: U. S. D. A. - ARS 1. Erosion: None to slight; wind removal predominates. 2. Data are from wheat plots in a controlled, long-term experiment initiated in 1957. 3. Reporting sequence will normally begin in July (following wheat harvest in June), and continue on same fallowed plots until new plots are available in July of following year. i.e., the plots reported on will be fallow from harvest of one year to harvest of the succeeding year. 4. Soil moisture: determined by standard oven drying. 107-110°C.
						Total 20.21						

See reference notes following Station Index.

TOTAL PRECIPITATION

1961

INCHES ARE DRAWN THROUGH POINTS OF APPROXIMATELY EQUAL VALUES. HOURLY PRECIPITATION DATA FROM RECORDER STATIONS WILL BE AVAILABLE IN THE PUBLICATION "HOURLY PRECIPITATION DATA."



TOTAL PRECIPITATION

ISOLINES ARE DRAWN THROUGH POINTS OF APPROXIMATELY EQUAL VALUES. HOURLY PRECIPITATION DATA FROM RECORDER SUBSTATIONS WILL BE AVAILABLE IN THE PUBLICATION "HOURLY PRECIPITATION DATA."

AVERAGE TEMPERATURE

1961

ISOLINES ARE DRAWN THROUGH POINTS OF APPROXIMATELY EQUAL VALUES.

AVERAGE TEMPERATURE

ISOLINES ARE DRAWN THROUGH POINTS OF APPROXIMATELY EQUAL VALUES.

FORT MCKAVETT	Recording rain gage moved 10 miles N from Sonora Fig 5 Rch	April 6, 1961
FORT STOCKTON 2 NE	Evaporation equipment removed	April 1, 1961
FT STOCKTON KFST RADIO	Equipment moved 3.5 miles SW	May 19, 1961
FROST	Rain gage moved 0.3 mile S	November 1, 1961
GRUVER	Rain gage moved 120 feet W	November 10, 1961
HAMILTON	Rain gage moved 2 1/4 miles SE	July 22, 1961
HUNTSVILLE	Equipment moved 1.1 miles S and changed from roof to ground exposure	May 3, 1961
JACKSONVILLE	Equipment moved 3000 feet SW	November 15, 1961
LA TUNA 1 S	Equipment moved 400 feet E	May 24, 1961
LIBERTY	Equipment moved 50 feet W	October 2, 1961
[illegible]	Equipment moved 45 feet E	August 30, 1961
[illegible]	Equipment moved 8 miles N and 2 miles W	June 1, 1961
[illegible]	Equipment moved 1 mile N	April 10, 1961
MARATHON	Equipment moved 1/2 mile S	September 1, 1961
MARFA 19 S	Rain gage moved 5 miles SE	September 4, 1961
MARFA NO 2	Equipment moved 800 feet E	May 22, 1961
[illegible]	Rain gage moved 3/4 mile N	February 23, 1961
[illegible]	Rain gage moved 4 miles NE	January 1, 1959
MINEOLA 9 SW	Rain gage moved 9 miles SW	October 1, 1961
NEW BRAUNFELS	Equipment moved 1/2 mile W	August 1, 1961
[illegible]	Rain gage moved 1/4 mile E	December 1, 1961
[illegible]	Equipment moved 1 mile W	March 25, 1961
[illegible]	Temperature equipment installed	November 13, 1961
[illegible]	Equipment moved 1/4 mile E	October 7, 1961
[illegible]	Rain gage moved 200 feet SW	April 11, 1961
[illegible]	Recording rain gage moved 800 feet NE	May 27, 1961
[illegible]	Equipment moved 0.8 mile SSW	July 27, 1961
[illegible]	Rain gage moved 0.6 mile W	August 29, 1961
[illegible]	Rain gage moved 0.5 mile SW and temperature equipment installed	November 18, 1961
[illegible]	Recording rain gage moved 1 mile WNW	June 15, 1961
[illegible]	Equipment moved 1/2 mile N	February 1, 1961
[illegible]	Rain gage moved 2000 feet SSE	February 1, 1961
[illegible]	Recording rain gage moved 1 mile W	November 20, 1961
[illegible]	Recording rain gage moved 6.5 miles NW from Fort McKavett	September 11, 1961
[illegible]	Recording rain gage moved 900 feet W	November 1, 1960

[illegible]: This temperature equipment was installed at a site over sod on the [illegible] to be comparable to the center of the runway complex but sufficiently distant from [illegible] to minimize or eliminate unfavorable effects.

REFERENCE NOTES

Additional information regarding the climate of Texas may be obtained by writing to the State Climatologist at Weather Bureau Airport Station, 3600 Manor Rd Austin 2, Texas, or to any Weather Bureau Office near you.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches, and wind movement in m

Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 4.

Climatological divisions, outlined on the maps in this bulletin, became effective with data for October 1956.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried in the June and December issues of Climatological Data.

- \- No record
- \- Also earlier date (dates) or months.
- * Amount included in following measurement.
- V Includes total for previous month. V in annual column means total is for a two-year period.
- \# Gage is equipped with a windshield. Thermometers are generally exposed in a shelter located a few feet above sod covered ground; however the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.
- B Adjusted to full month.
- C Data for recorder stations denoted by "C" in the Refer to Tables column of the Station Index are processed for special purposes and published in "Hourly Precipitation Data". Length of record for recorder-only stations may be found in the annual issue of "Hourly Precipitation Data".
- E Amount is wholly or partially estimated.
- M One or more days' record missing; if average value is entered, less than 10 days record is missing. See monthly Climatological Data for detailed daily record.
- P Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
- T Trace, an amount too small to measure.

Information concerning the history of changes in location, elevations, exposures, etc., of substations through 1955 may be found in the publication "Substa Histories" for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C., for $1.00. Similar information for regular Weather Bureau stations may be found in the latest issue of Local Climatological Data annuals, obtained as indicated above.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders sh be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documen Government Printing Office, Washington 25, D. C.

JANUARY 1962
Volume 67 No. 1

ASHEVILLE: 1962

TEXAS - JANUARY 1962

WEATHER SUMMARY

January weather was cold and dry. Average monthly temperatures were 4 to 6 degrees be normal while precipitation was less than one-half normal over much of the State. The m severe cold wave since 1951 engulfed the State January 9-12. In North Texas, it was coldest January since 1949, while in South Texas, some stations recorded their lowest t peratures of the century.

Heavy snow and sleet, blown by 40-50 m.p.h. winds caused near blizzard conditions in northwestern Texas area west of Wichita Falls on the 5th. Up to 5 inches of snow fell Chillicothe.

The cold wave, January 9-12, was the most damaging since the severe freeze of January February 3, 1951. Low temperatures ranged from 15° below zero at Higgins in the Panhan on the 10th, to 10° above zero at Rio Grande City in the Lower Rio Grande Valley on 12th. Freezing temperatures or lower were continuous for approximately 65 hours at alm all Lower Rio Grande Valley stations. The minimum of 19° at Brownsville on the 12th the lowest temperature since 1899. The sub-freezing temperatures caused extensive dam to winter vegetables, citrus fruits, flax, and some small grains. Citrus losses were es mated at 9.5 million dollars and South Texas vegetable losses at 8 million. Citrus t losses were estimated at not more than 15 percent compared to 85 percent in the 1951 free Water pipe damage was extensive throughout South Texas. Total agricultural losses w roughly estimated at 50 million dollars and property losses at 10 million. Little be ficial moisture accompanied the cold wave except for 3 to 6 inches of snow in Northe Texas. Snowfall was heaviest in the Texarkana area, where 7.5 inches fell, the grea 24-hour amount in 20 years. All-time high pressure records reduced to mean sea level established on the 10th as follows: Austin, 30.98 inches; Houston Airport, 30.88 inc Corpus Christi, 30.90 inches; and Wichita Falls, 31.09 inches. Two deaths resulted exposure; 36 other deaths were blamed on the weather indirectly. Ice formed on Galve Bay, and extended as far as 100-150 yards from shore at Texas City.

On the 22d, another Arctic front sheathed the northern two-thirds of the State in a of ice. Roads and thoroughfares were iced over or had icy bridges north and east of a from Big Spring through San Angelo, Mason, Belton, Palestine and Tyler to Carthage.

Heavy rains fell in the upper Trinity basin on the 9th, and on the lower Trinity basin the 14th to 18th. Slight flooding resulted in the lowlands near Liberty. The Lit Sulphur, and Cypress Rivers flooded as a result of 2- to 3-inch rains January 22 thr the 27th.

For detailed information, the reader is referred to STORM DATA, and WEATHER AND CROP LETINS, for January.

Robert B. Orton
Weather Bureau State Climatol
3600 Manor Road
Austin 2, Texas

MONTHLY EXTREMES

Highest Temperature: 88° on the 22+ at Three Stations

Lowest Temperature: -14° on the 11+ at Three Stations

Greatest Total Precipitation: 7.05 inches at Linden

Least Total Precipitation: 0.00 at Several Stations

Greatest one-day Precipitation: 2.70 inches on the 26th at Rusk

Greatest Total Snowfall: 7.0 inches at Three Stations

Deepest Snow on Ground: 6 inches on the 10th at Atlanta

See reference notes following Station Index.

REFERENCE NOTES

Additional information regarding the climate of Texas may be obtained by writing to the Weather Bureau State Climatologist, 3600 Manor Road, Austin 2, Texas, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table and on the maps, became effective with data for October 1956.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches, and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Normals for all stations are climatological standard normals based on the period 1931-1960.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently, occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the seasonal snowfall table include snow and sleet. Entries of snow on ground include snow, sleet and ice.

Data in the "Monthly Extremes" Table; "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table; and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time.

Snow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and FAA Stations. For those stations snow on ground values are at 0600 C.S.T.

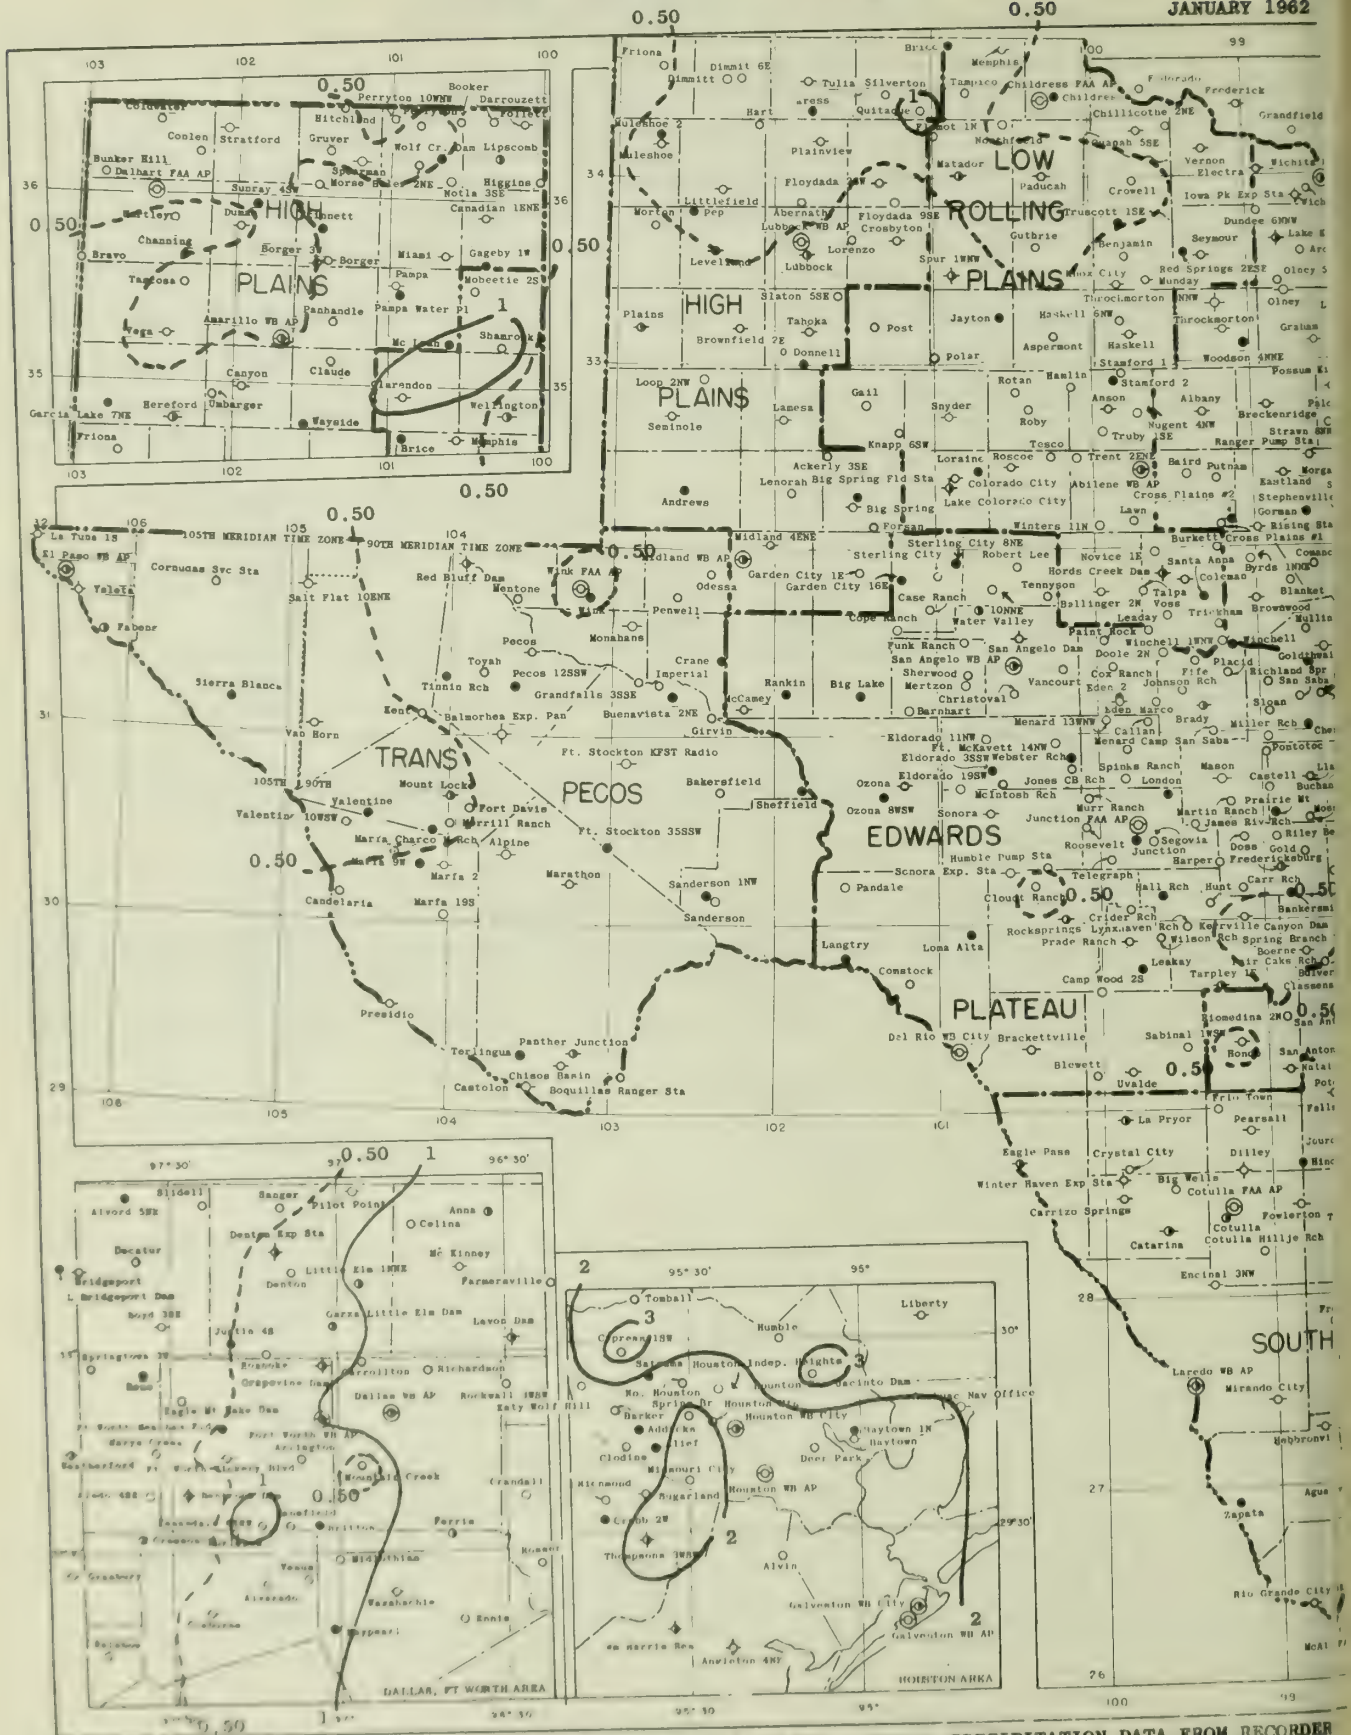
In the Station Index the letters C, H, and J in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C	Recording Rain Gage Station. Hourly precipitation values are processed for special purposes. and are published later in "Hourly Precipitation Data" Bulletin.
H	"Snowfall and Snow on Ground" Table. Omission of data in any month indicates no snowfall and/or snow on ground in that month.
J	"Supplemental Data" Table.

OTHER REFERENCE NOTES

	No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry. Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.
-	No record in the "Supplemental Data" Table; "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; and the Station Index.
+	And also on an earlier date or dates.
*	Amount included in following measurement, time distribution unknown.
#	Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
D	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.
R	Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
SS	This entry in time of observation column in Station Index means observation made near sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.

General weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA-NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C.



Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1955 may be found in the publication "Substation History" for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C. for $1.00. Similar information for regular Weather Bureau stations may be found in the latest annual issues of Local Climatological Data, obtained as indicated above, price 15 cents.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittance and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

FEBRUARY 1962
Volume 67 No. 2

ASHEVILLE: 1962

TEXAS - FEBRUARY 1962

WEATHER SUMMARY

Dry, sunny unseasonably mild weather characterized all but the last few days o the month. Average temperatures for February were 4 to 8 degrees above normal ar many record high temperatures were set for individual days. Port Arthur reporte 84° on the 9th, the highest February temperature ever recorded. Corpus Christ recorded the warmest February average temperature since records began in 188

Four weeks of mild weather were followed by a severe cold wave the 26th to 28 (and extended through March 2), plunging temperatures to zero degrees in the Pa handle and to 14 degrees at Midland. Fruit trees in full bloom in Central a North Texas were caught by the hard freeze, and fruit loss, expecially peaches a plums, will be extremely heavy.

Moisture was below normal for the third consecutive month, and less than one-ha normal in South and Central Texas. El Paso was the exception with above norm rainfall for the 4th consecutive month. Thundershowers were general on the 14 with significant amounts in Central and East Texas. Small rains were numerous North-Central and Southeast Texas the last week in February.

A small tornado touched ground in Lee County on the 15th, and another struck the same county on the 23d. Other tornadoes struck in Angelina and Harrison Cou ties on the 23d. There were no injuries from any of these storms and only min property damage resulted.

For detailed information, the reader is referred to STORM DATA, and WEEKLY WEATH AND CROP BULLETINS, for February.

Robert B. Orton
Weather Bureau State Climatologi
3600 Manor Road
Austin 2, Texas

MONTHLY EXTREMES

Highest Temperature: 99° on the 9th at McAllen

Lowest Temperature: -3° on the 28th at Follett

Greatest Total Precipitation: 6.39 inches at Pittsburg 5 S

Least Total Precipitation: 0.00 at Numerous Stations

Greatest one-day Precipitation: 3.12 inches on the 15th at Columbus

Greatest Total Snowfall: 1.0 inch at Two Stations

Deepest Snow on Ground: 1 inch on the 28+ at Four Stations

REFERENCE NOTES

Additional information regarding the climate of Texas may be obtained by writing to the Weather Bureau State Climatologist, 3600 Manor Road, Austin 2, Texas, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the 12 months ending with the June data will be carried in the July issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table and on the maps, became effective with data for October 1956.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches, and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Normals for all stations are climatological standard normals based on the period 1931-1960.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently, occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the seasonal snowfall table include snow and sleet. Entries of snow on ground include snow, sleet and ice.

Data in the "Monthly Extremes" Table; "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table; and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time.

Snow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and FAA Stations. For those stations snow on ground values are at 0600 C.S.T.

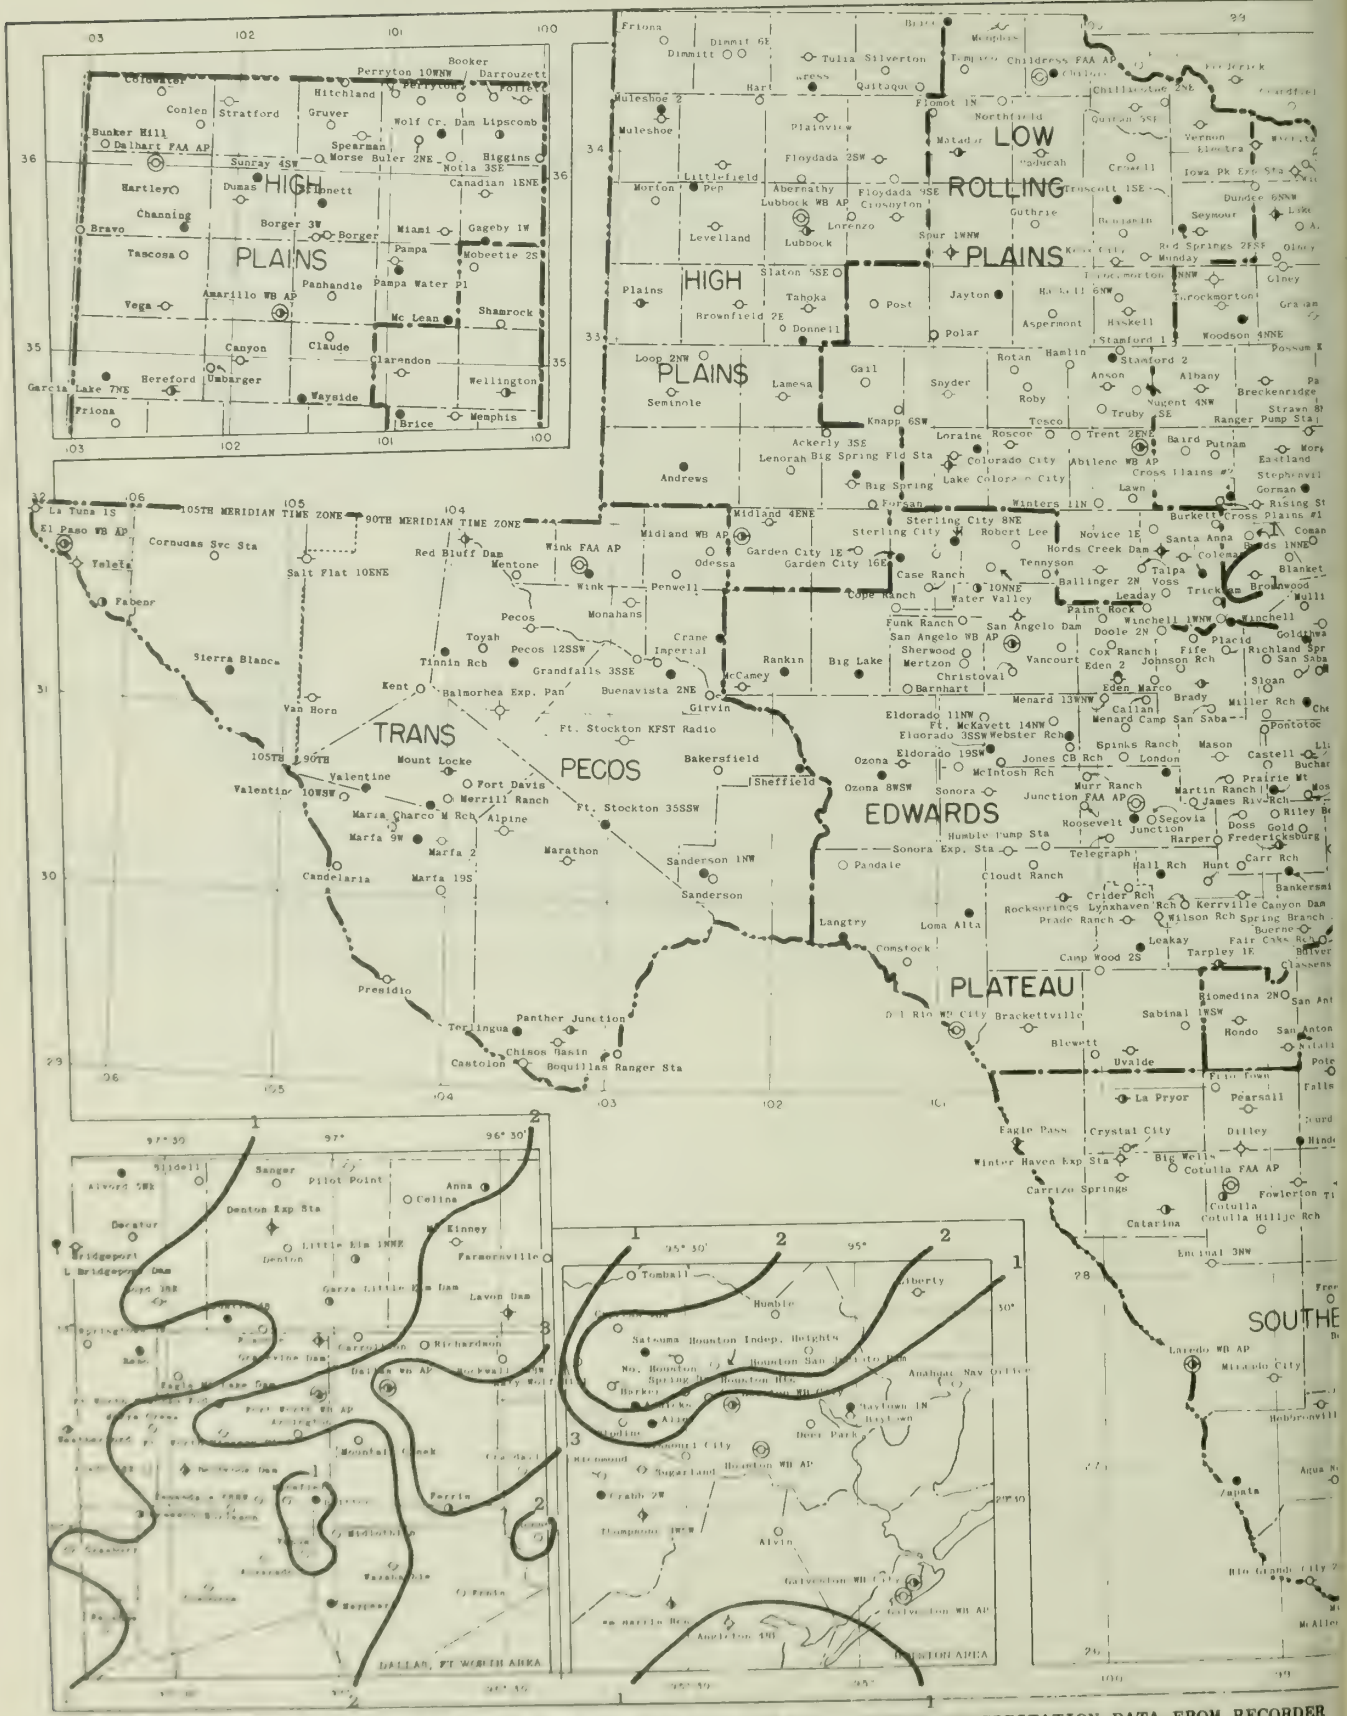
In the Station Index the letters C, H, and J in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C	Recording Rain Gage Station. Hourly precipitation values are processed for special purposes. and are published later in "Hourly Precipitation Data" Bulletin.
H	"Snowfall and Snow on Ground" Table. Omission of data in any month indicates no snowfall and/or snow on ground in that month.
J	"Supplemental Data" Table.

OTHER REFERENCE NOTES

	No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.
	Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.
-	No record in the "Supplemental Data" Table; "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; and the Station Index.
&	And also on an earlier date or dates.
*	Amount included in following measurement, time distribution unknown.
#	Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
D	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.
R	Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
SS	This entry in time of observation column in Station Index means observation made near sunset.
T	Trace, an amount too small to measure.
Y	Includes total for previous month.

General weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA-NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C.



Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1955 may be found in the publication "Substation History" for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C. for $1.00. Similar information for regular Weather Bureau stations may be found in the latest annual issues of Local Climatological Data, obtained as indicated above, price 5 cents.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittance and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

MONTHLY EXTREMES

Highest Temperature: 100° on the 20th at Agua Nueva

Lowest Temperature: -2° on the 1st at Follett

Greatest Total Precipitation: 4.41 inches at Negley

Least Total Precipitation: 0.00 at Numerous Stations

Greatest one-day Precipitation: 2.12 inches on the 31+ at Two Stations

Greatest Total Snowfall: 8.5 inches at Two Stations

Deepest Snow on Ground: 8 inches on the 14th at Lake Colorado City

See reference notes following Station Index.

REFERENCE NOTES

ditional information regarding the climate of Texas may be obtained by writing to the Weather Bureau State Climatologist, 3600 Manor Road, Austin 2, Texas, or any Weather Bureau Office near you.

gures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

layed data and corrections will be carried only in the June and December issues of this bulletin.

nthly and seasonal snowfall and heating degree days for the 12 months ending with the June data will be carried in the July issue of this bulletin.

ations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

visions, as used in "Climatological Data" Table and on the maps, became effective with data for October 1956.

less otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches, and wind movement in miles. nthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

aporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

rmals for all stations are climatological standard normals based on the period 1931-1960.

ter equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining asurements are taken from different points for successive observations; consequently, occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

tries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the seasonal snowfall table include snow and sleet. tries of snow on ground include snow, sleet and ice.

a in the "Monthly Extremes" Table; "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table; and snowfall in the "Snowfall and ow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. ing the summer months some observers take the observations on daylight saving time.

w on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and FAA Stations. For those stations snow on ground ues are at 0600 C.S.T.

the Station Index the letters C, H, and J in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C	Recording Rain Gage Station. Hourly precipitation values are processed for special purposes. and are published later in "Hourly Precipitation Data" Bulletin.
H	"Snowfall and Snow on Ground" Table. Omission of data in any month indicates no snowfall and/or snow on ground in that month.
J	"Supplemental Data" Table.

OTHER REFERENCE NOTES

	No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.
	Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.
-	No record in the "Supplemental Data" Table; "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; and the Station Index.
+	And also on an earlier date or dates.
*	Amount included in following measurement, time distribution unknown.
#	Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
D	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.
R	Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
SS	This entry in time of observation column in Station Index means observation made near sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.

eral weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA-NATIONAL SUMMARY, and RM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C.

ormation concerning the history of changes in locations, elevations, exposure, etc., of substations through 1955 may be found in the publication "Substation tory" for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C. for $1.00. ilar information for regular Weather Bureau stations may be found in the latest annual issues of Local Climatological Data, obtained as indicated above, price cents.

scription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should made payable to the Superintendent of Documents. Remittance and correspondence regarding subscriptions should be sent to the Superintendent of Documents, ernment Printing Office, Washington 25, D. C.

MONTHLY EXTREMES

Highest Temperature: 104° on the 30+ at Two Stations

Lowest Temperature: 20° on the 2d at Dumas

Greatest Total Precipitation: 8.95 inches at Dallas WB Airport

Least Total Precipitation: 0.00 at Valentine 10 WSW

Greatest one-day Precipitation: 6.05 inches on the 27th at Shamrock

Greatest Total Snowfall: T at Three Stations

See reference notes following Station Index.

	SNOW ON GND																																

See reference notes following Station Index.

REFERENCE NOTES

Additional information regarding the climate of Texas may be obtained by writing to the Weather Bureau State Climatologist, 3600 Manor Road, Austin 2, Texas, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the 12 months ending with the June data will be carried in the July issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in "Climatological Data" Table and on the maps, became effective with data for October 1956.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches, and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

Normals for all stations are climatological standard normals based on the period 1931-1960.

Water equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently, occasional drifting and other causes of local variability in the snowpack may result in apparent inconsistencies in the record.

Entries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the seasonal snowfall table include snow and sleet. Entries of snow on ground include snow, sleet and ice.

Data in the "Monthly Extremes" Table; "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table; and snowfall in the "Snowfall and Snow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. During the summer months some observers take the observations on daylight saving time.

Snow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and FAA Stations. For those stations snow on ground values are at 0600 C.S.T.

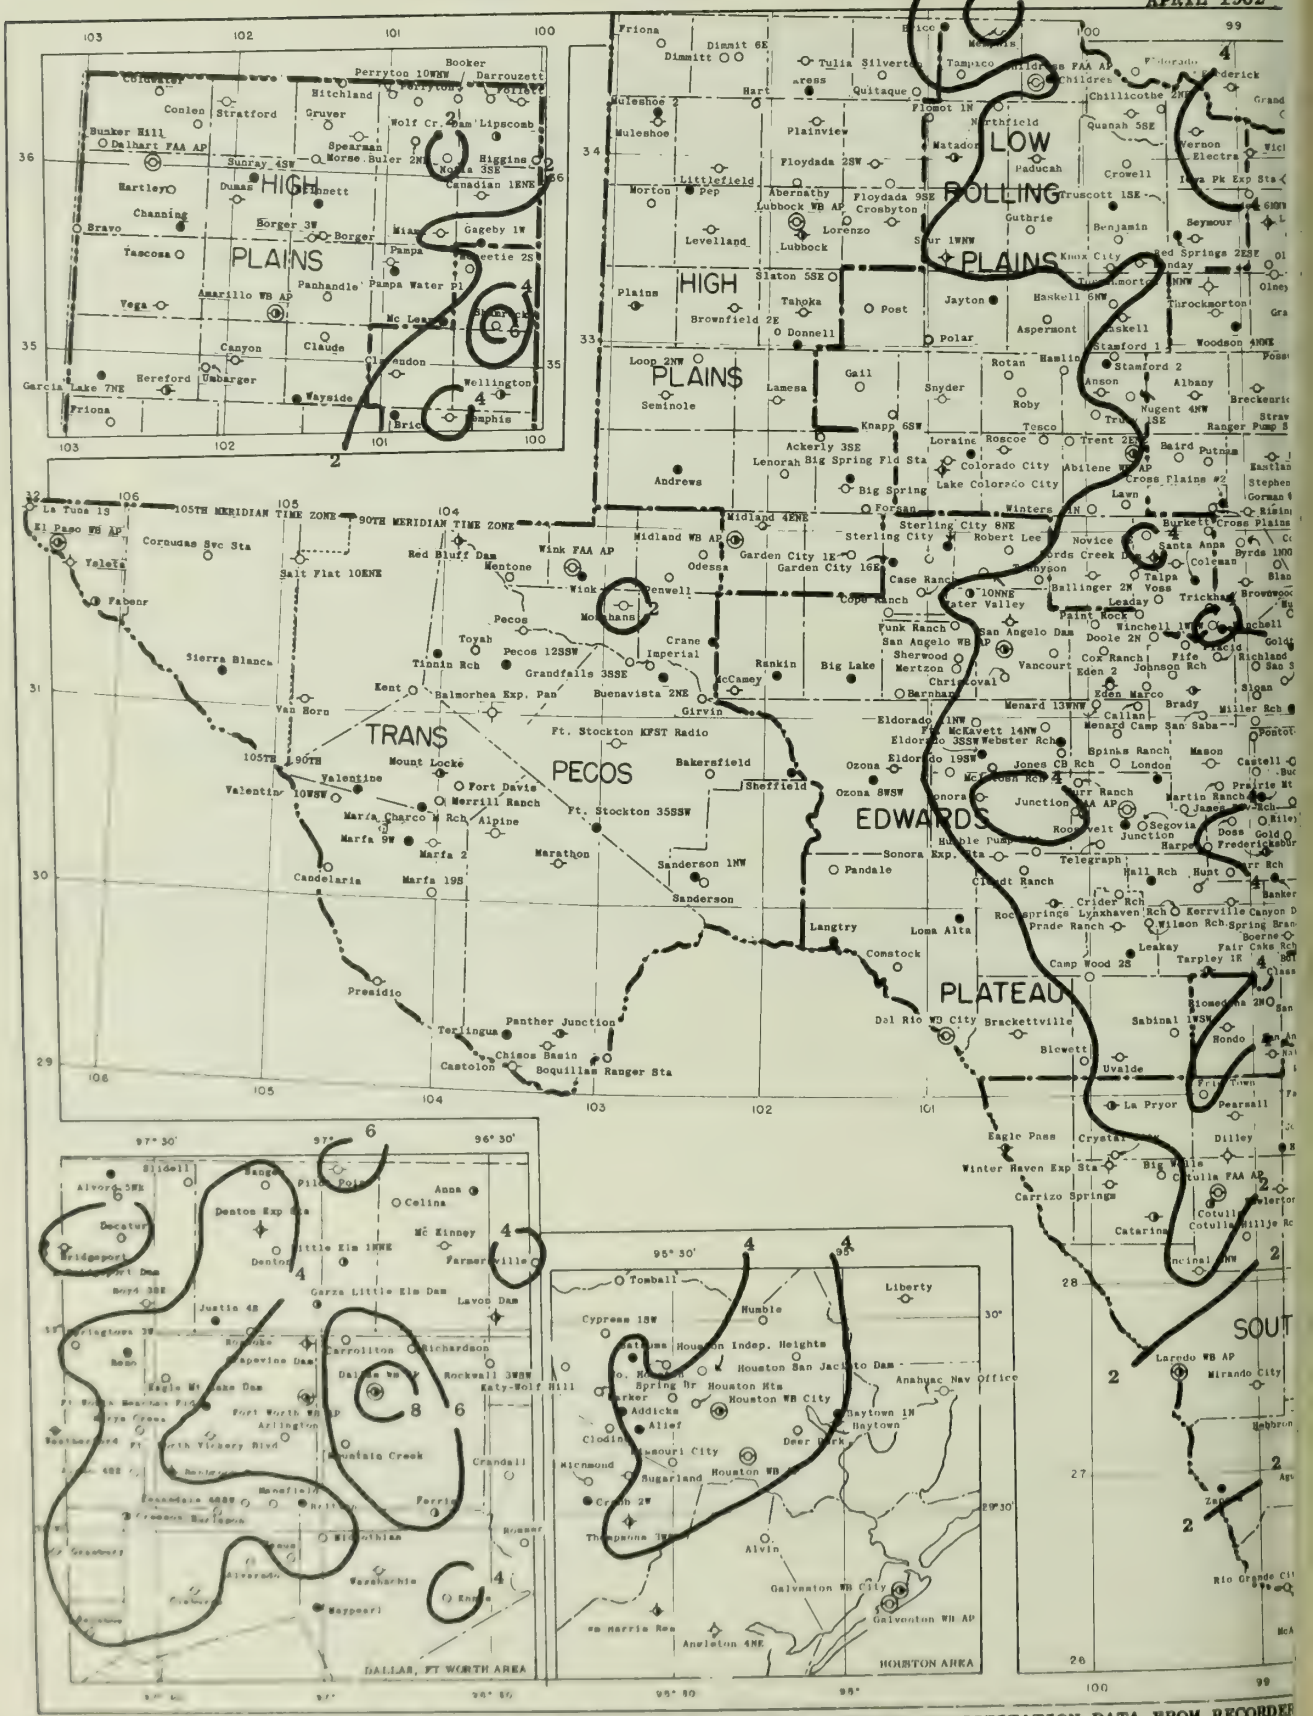
In the Station Index the letters C, H, and J in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C	Recording Rain Gage Station. Hourly precipitation values are processed for special purposes. and are published later in "Hourly Precipitation Data" Bulletin.
H	"Snowfall and Snow on Ground" Table. Omission of data in any month indicates no snowfall and/or snow on ground in that month.
J	"Supplemental Data" Table.

OTHER REFERENCE NOTES

	No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.
	Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.
-	No record in the "Supplemental Data" Table; "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; and the Station Index.
+	And also on an earlier date or dates.
*	Amount included in following measurement, time distribution unknown.
#	Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
D	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.
R	Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
SS	This entry in time of observation column in Station Index means observation made near sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.

General weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA-NATIONAL SUMMARY, and STORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C.



Information concerning the history of changes in locations, elevations, exposure, etc., of substations through 1955 may be found in the publication "Substation History" for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C. for $1.00. Similar information for regular Weather Bureau stations may be found in the latest annual issues of Local Climatological Data, obtained as indicated above, price 5 cents.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittance and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

ASHEVILLE: 1962

TEXAS - MAY 1962

WEATHER SUMMARY

The month of May was one of the driest and windiest on record. Except fo
few rains in Northwest Texas, little or no measureable rain fell for the fi
27 days. General thundershower activity on the 28th and 31st prevented t
from being the driest May on record. Since the turn of the century, only
1927 has the State received less rainfall in May. Most sections of the St
had monthly rainfall deficiencies of from two to four inches. May is norma
the wettest month of the year in Texas.

Temperatures generally were above normal over the State, and more than
degrees above normal in Northwest Texas. Southerly winds were strong and p
sistent throughout the month. Wind and hailstorms were numerous on the 27
28th, and 31st, resulting in heavy damage to ripening wheat and young cot
in West and Northwest Texas.

For detailed information, the reader is referred to STORM DATA, and WEE
WEATHER AND CROP BULLETINS, for May.

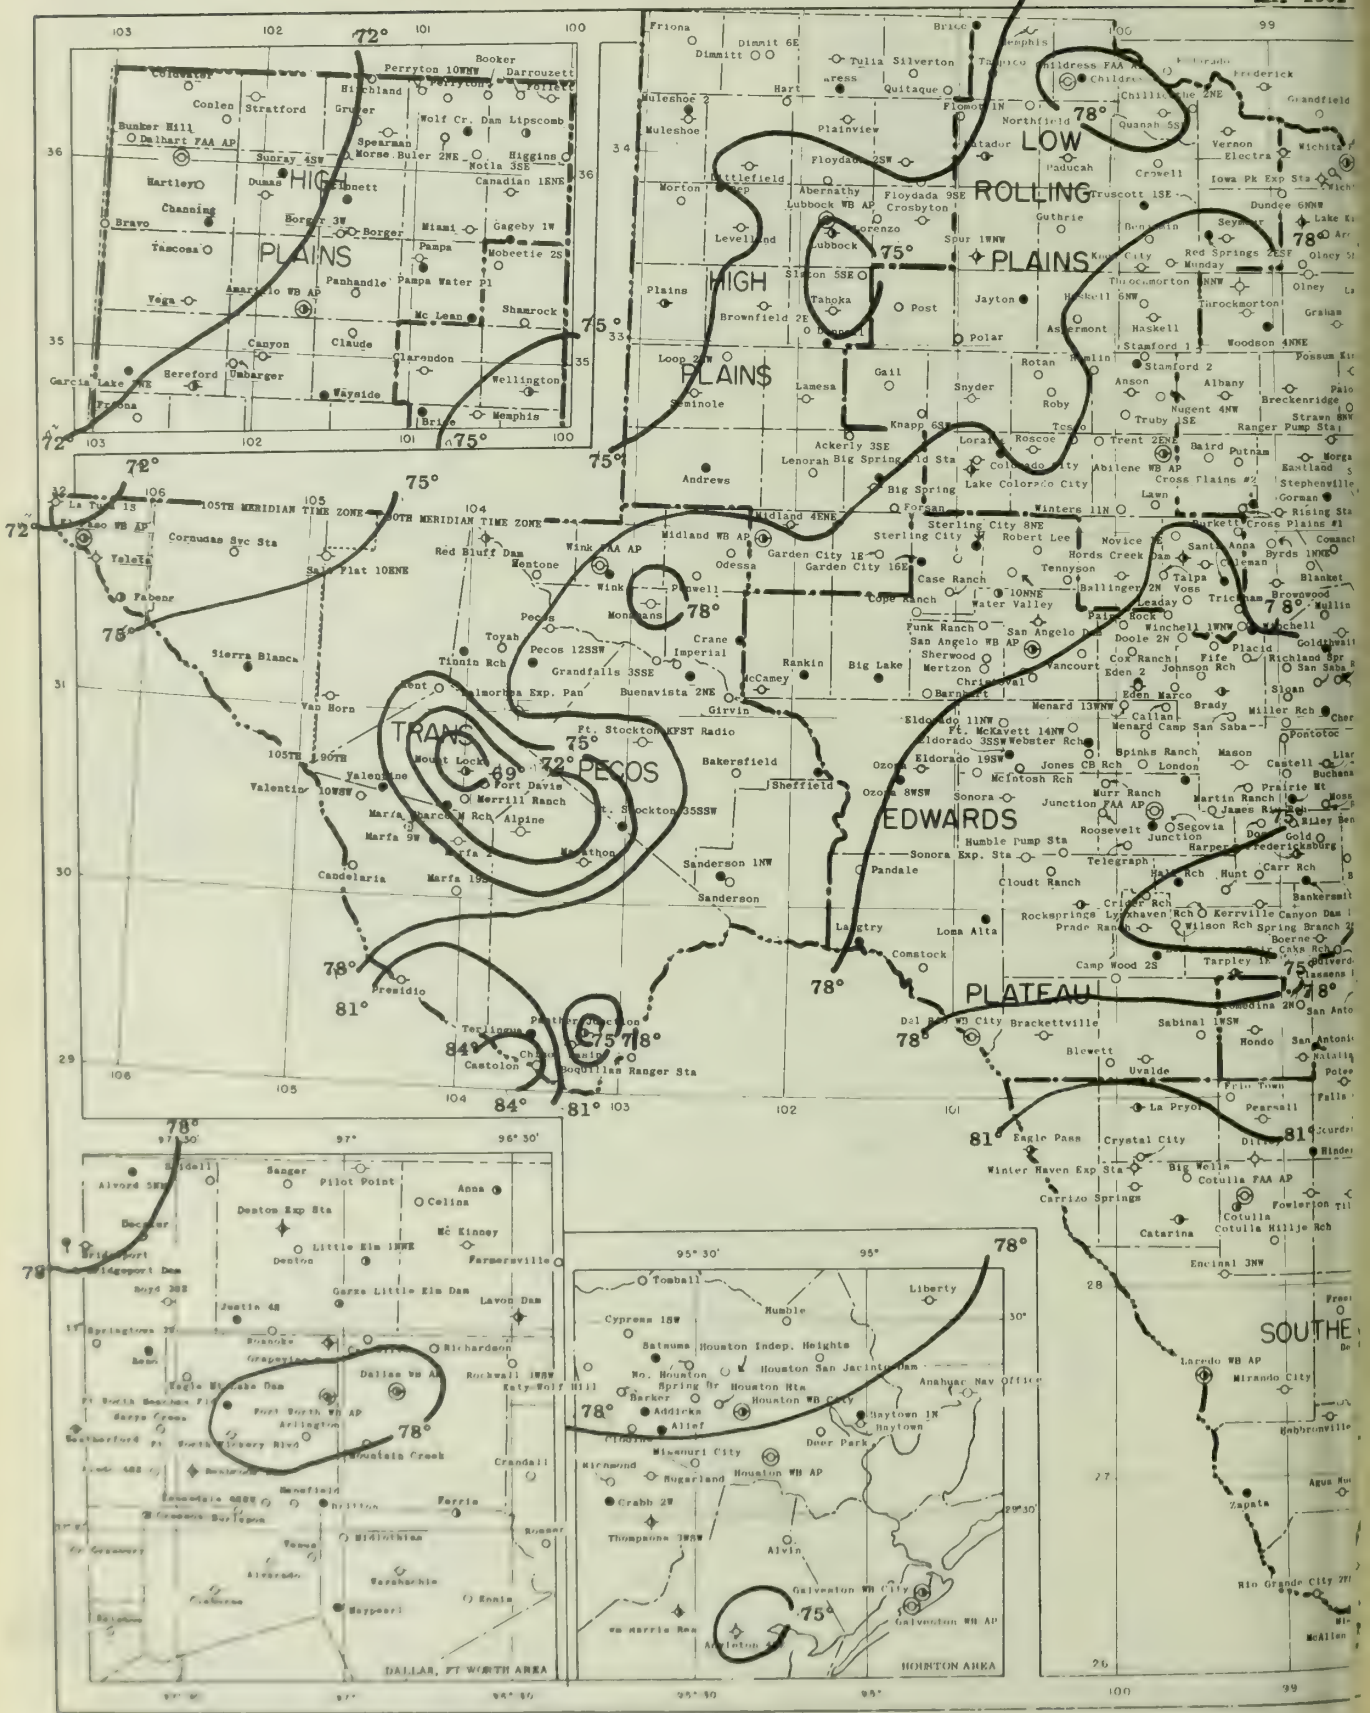
MAX AND MIN IN DAILY EVAPORATION TABLE REFER TO EXTREMES OF TEMPERATURE OF WATER IN PAN AS RECORDED DURING THE 24 HOURS ENDING AT TIME OF OBSERVATION.
(A) EVAPORATION MEASURED IN A SUNKEN SCREENED PAN OF 24-INCH DIAMETER.
(F) ALUMINUM (ONE-FOURTH INCH THICK) EVAPORATION PAN.

See reference notes following Station Index.

TOTAL PRECIPITATION

ISOLINES ARE DRAWN THROUGH POINTS OF APPROXIMATELY EQUAL VALUES. HOURLY PRECIPITATION DATA FROM RECORDE
SUBSTATIONS WILL BE AVAILABLE IN THE PUBLICATION "HOURLY PRECIPITATION DATA."

TOTAL PRECIPITATION



MAY 1962

ISOLINES ARE DRAWN THROUGH POINTS OF APPROXIMATELY EQUAL VALUES. HOURLY PRECIPITATION DATA FROM RECORDER SUBSTATIONS WILL BE AVAILABLE IN THE PUBLICATION "HOURLY PRECIPITATION DATA."

AVERAGE TEMPERATURE

MAY 1962

ISOLINES ARE DRAWN THROUGH POINTS OF APPROXIMATELY EQUAL VALUES.

AVERAGE TEMPERATURE

ISOLINES ARE DRAWN THROUGH POINTS OF APPROXIMATELY EQUAL VALUES.

REFERENCE NOTES

dditional information regarding the climate of Texas may be obtained by writing to the Weather Bureau State Climatologist, 3600 Manor Road, Austin 2, Texas, or o any Weather Bureau Office near you.

igures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

elayed data and corrections will be carried only in the June and December issues of this bulletin.

onthly and seasonal snowfall and heating degree days for the 12 months ending with the June data will be carried in the July issue of this bulletin.

tations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

ivisions, as used in "Climatological Data" Table and on the maps, became effective with data for October 1956.

nless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches, and wind movement in miles. onthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

vaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

ormals for all stations are climatological standard normals based on the period 1931-1960.

ter equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining asurements are taken from different points for successive observations; consequently, occasional drifting and other causes of local variability in the snowpack y result in apparent inconsistencies in the record.

itries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the seasonal snowfall table include snow and sleet. itries of snow on ground include snow, sleet and ice.

ta in the "Monthly Extremes" Table; "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table; and snowfall in the "Snowfall and ow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. ring the summer months some observers take the observations on daylight saving time.

ow on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and FAA Stations. For those stations snow on ground lues are at 0600 C.S.T.

the Station Index the letters C, H, and J in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C Recording Rain Gage Station. Hourly precipitation values are processed for special purposes. and are published later in "Hourly Precipitation Data" Bulletin.
H "Snowfall and Snow on Ground" Table. Omission of data in any month indicates no snowfall and/or snow on ground in that month.
J "Supplemental Data" Table.

OTHER REFERENCE NOTES

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.
Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.
\- No record in the "Supplemental Data" Table; "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; and the Station Index.
\+ And also on an earlier date or dates.
* Amount included in following measurement, time distribution unknown.
\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.
// Gage is equipped with a windshield.
AM This entry in time of observation column in Station Index means after rain.
B Adjusted to a full month.
D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.
R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
SS This entry in time of observation column in Station Index means observation made near sunset.
T Trace, an amount too small to measure.
V Includes total for previous month.

neral weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA-NATIONAL SUMMARY, and ORM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C.

formation concerning the history of changes in locations, elevations, exposure, etc., of substations through 1955 may be found in the publication "Substation story" for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C. for $1.00. ilar information for regular Weather Bureau stations may be found in the latest annual issues of Local Climatological Data, obtained as indicated above, price cents.

scription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should made payable to the Superintendent of Documents. Remittance and correspondence regarding subscriptions should be sent to the Superintendent of Documents, ernment Printing Office, Washington 25, D. C.

MAX AND MIN IN DAILY EVAPORATION TABLE REFER TO EXTREMES OF TEMPERATURE OF WATER IN PAN AS RECORDED DURING THE 24 HOURS ENDING AT TIME OF OBSERVATION.
(A) EVAPORATION MEASURED IN A SUNKEN SCREENED PAN OF 24-INCH DIAMETER.
(F) EVAPORATION (ONE-FOURTH INCH THICK) EVAPORATION PAN.

See reference notes following Station Index.

Precipitation since previous soil moisture measurement.

Deficit = negative available moisture indicates amount below wilting point. Negative deficit indicates amount of gravitational water present, i.e. amount that the moisture content exceeds field capacity.

Willacy fine sandy loam	Straw mulch	0		Neutron Probe							
Willacy fine sandy loam	Soil mulch	0		Neutron Probe							

See reference notes following Station Index.

REFERENCE NOTES

ditional information regarding the climate of Texas may be obtained by writing to the Weather Bureau State Climatologist, 3600 Manor Road, Austin 2, Texas, or any Weather Bureau Office near you.

gures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

layed data and corrections will be carried only in the June and December issues of this bulletin.

nthly and seasonal snowfall and heating degree days for the 12 months ending with the June data will be carried in the July issue of this bulletin.

ations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

visions, as used in "Climatological Data" Table and on the maps, became effective with data for October 1956.

less otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches, and wind movement in miles. nthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

aporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following the "Evaporation and Wind" Table.

rmals for all stations are climatological standard normals based on the period 1931-1960.

er equivalent values published in the "Snowfall and Snow on Ground" Table are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining asurements are taken from different points for successive observations; consequently, occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record.

tries of snowfall in the "Climatological Data" Table and the "Snowfall and Snow on Ground" Table, and in the seasonal snowfall table include snow and sleet. tries of snow on ground include snow, sleet and ice.

a in the "Monthly Extremes" Table; "Daily Precipitation" Table; "Daily Temperature" Table; and "Evaporation and Wind" Table; and snowfall in the "Snowfall and ow on Ground" Table, when published, are for the 24 hours ending at time of observation. The Station Index shows observation times in local standard time. ring the summer months some observers take the observations on daylight saving time.

w on ground in the "Snowfall and Snow on Ground" Table is at observation time for all except Weather Bureau and FAA Stations. For those stations snow on ground lues are at 0600 C.S.T.

the Station Index the letters C, H, and J in the "Special" column under the heading "Observation Time and Tables", indicate the following:

C Recording Rain Gage Station. Hourly precipitation values are processed for special purposes. and are published later in "Hourly Precipitation Data" Bulletin.
H "Snowfall and Snow on Ground" Table. Omission of data in any month indicates no snowfall and/or snow on ground in that month.
J "Supplemental Data" Table.

OTHER REFERENCE NOTES

No record in the "Climatological Data" Table and the "Daily Temperature" Table is indicated by no entry.
Interpolated values for monthly precipitation totals may be found in the annual issue of this publication.
– No record in the "Supplemental Data" Table; "Daily Precipitation" Table; "Evaporation and Wind" Table; "Snowfall and Snow on Ground" Table; and the Station Index.
+ And also on an earlier date or dates.
* Amount included in following measurement, time distribution unknown.
Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.
// Gage is equipped with a windshield.
AR This entry in time of observation column in Station Index means after rain.
B Adjusted to a full month.
D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M One or more days of record missing; if average value is entered, less than 10 days record is missing. See "Daily Temperature" Table for detailed daily record. Degree day data, if carried for this station, have been adjusted to represent the value for a full month.
R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in Hourly Precipitation Data.)
SS This entry in time of observation column in Station Index means observation made near sunset.
T Trace, an amount too small to measure.
V Includes total for previous month.

eral weather conditions in the U. S. for each month are described in the publications MONTHLY WEATHER REVIEW, MONTHLY CLIMATOLOGICAL DATA-NATIONAL SUMMARY, and RM DATA, all of which may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C.

ormation concerning the history of changes in locations, elevations, exposure, etc., of substations through 1955 may be found in the publication "Substation itory" for this state. That publication may be obtained from the Superintendent of Documents, Government Printing Office, Washington 25, D. C. for $1.00. ilar information for regular Weather Bureau stations may be found in the latest annual issues of Local Climatological Data, obtained as indicated above, price cents.

scription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should made payable to the Superintendent of Documents. Remittance and correspondence regarding subscriptions should be sent to the Superintendent of Documents, ernment Printing Office, Washington 25, D. C.

USCOMM-WB-ASHEVILLE---8-9-62---1575

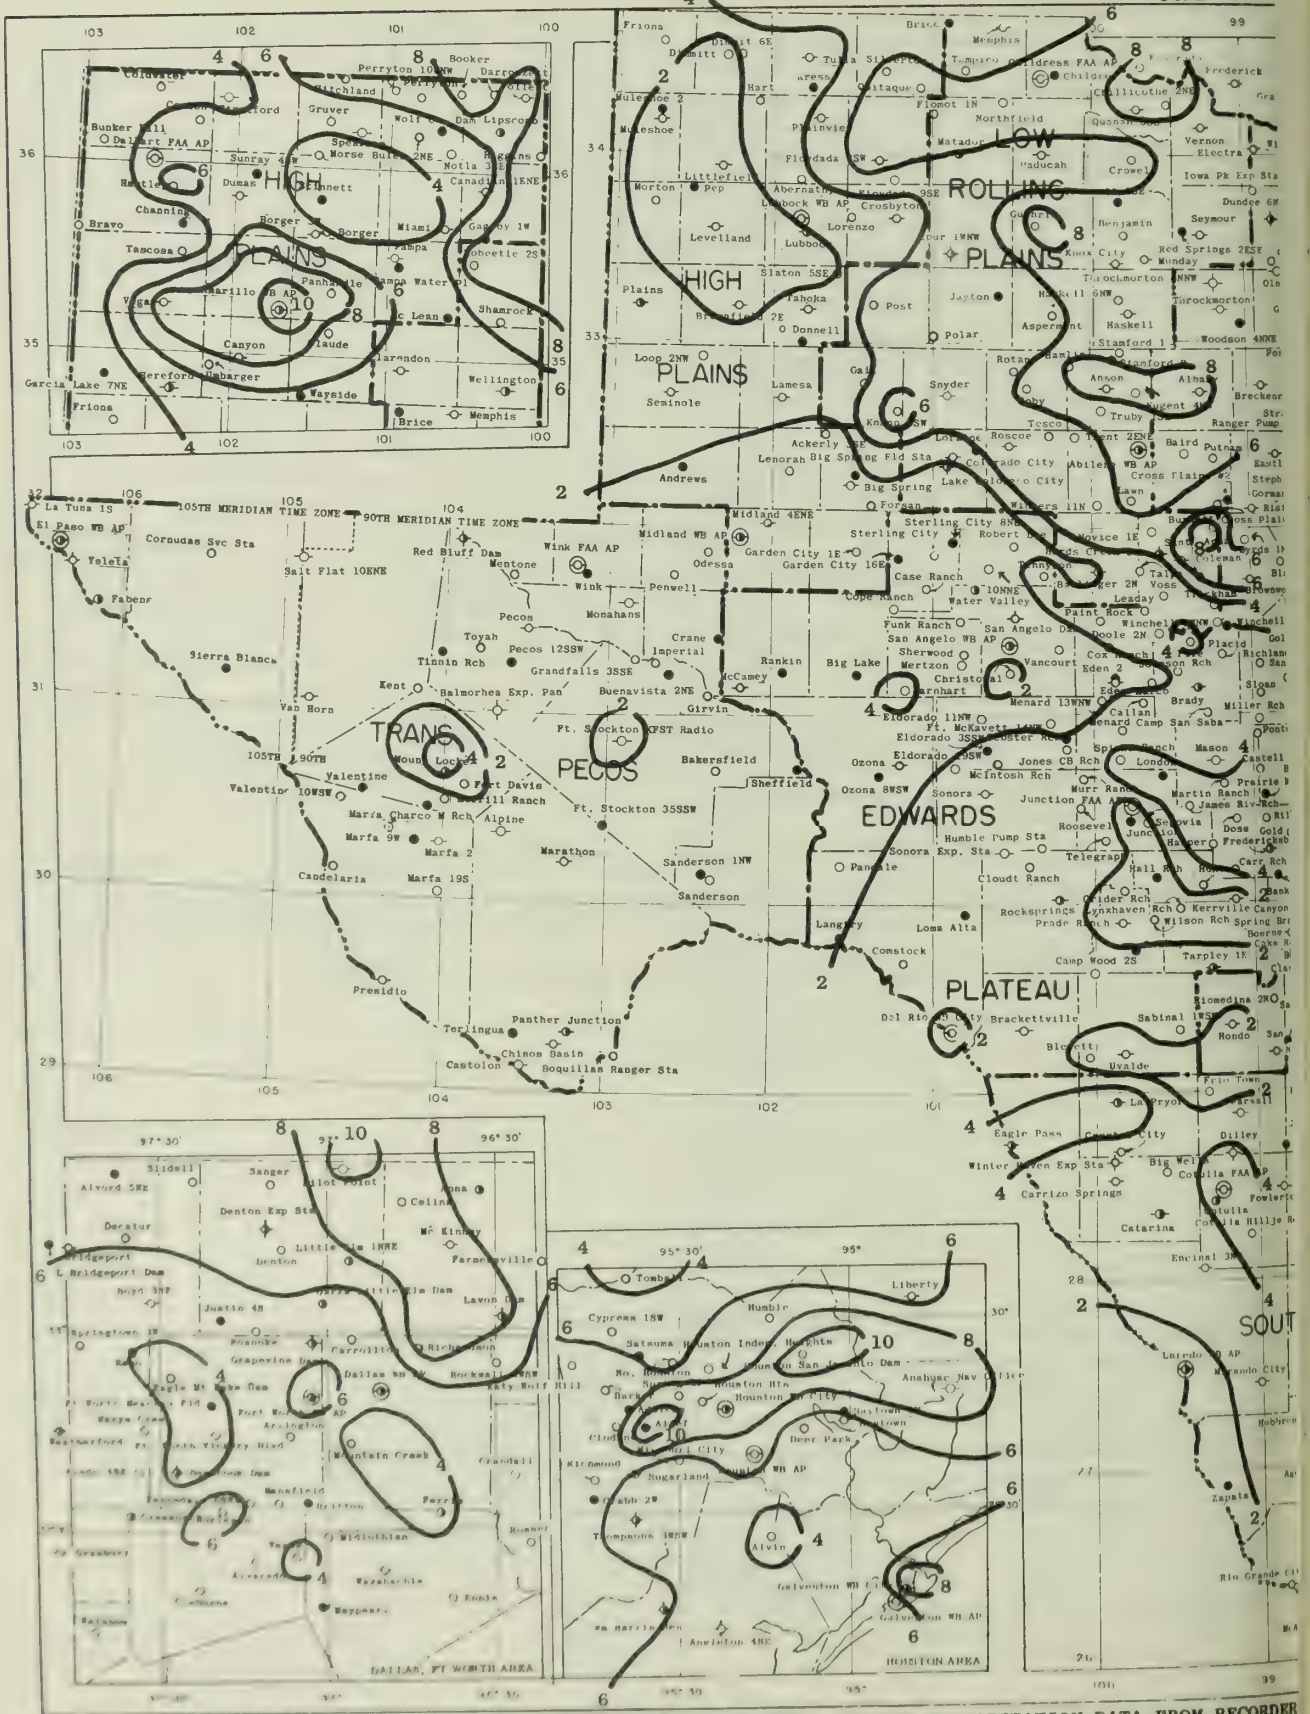
CORRECTIONS

JULY 1961 THROUGH DECEMBER 1961: MANSFIELD DAM, Evaporation and Wind Table, Evaporation Data from 2-foot pan instead of 4-foot pan.

DECEMBER 1961: MANSFIELD DAM, Climatological Data Table, Average Maximum Temperature should be 62.1, Average 51.5, and Degree Days 425.

MANSFIELD DAM, Daily Temperatures Table, Max on the 6th should be 64 and the Average 62.1.

ANNUAL 1961: FORT MCKAVETT, Station Index, Station should have been listed and shown opened April and closed September.

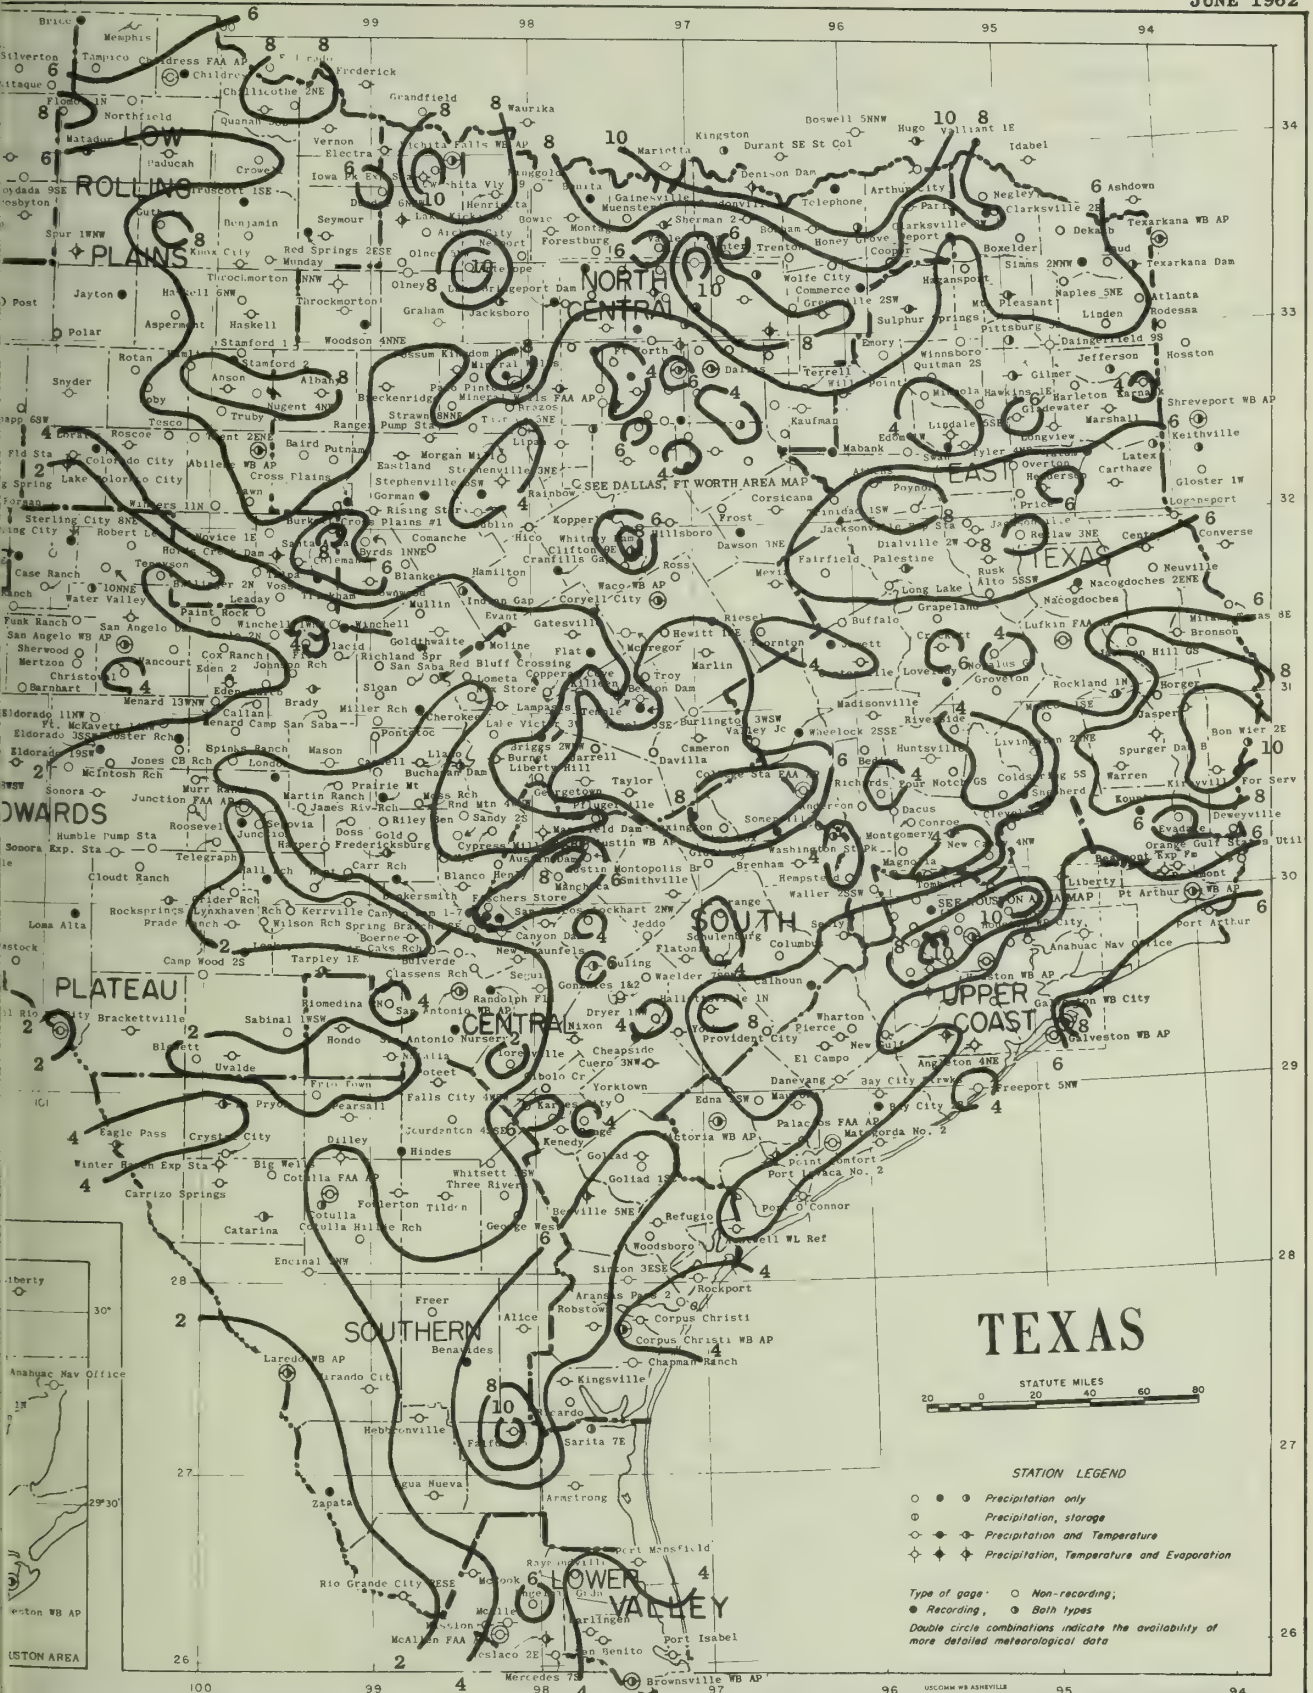


FEBRUARY 1962: HOUSTON WB AIRPORT, Climatological Data Table, Average Minimum Temperature should be 53.2, Average 63.9, and Departure 6.6.

HOUSTON WB AIRPORT, Daily Temperatures Table, Min on the 14th should be 56 and the Average 53.2.

APRIL 1962: CLOUDT RANCH, Daily Precipitation Table, Amount on the 4th should be 0, 6th 0, 7th .81, 18th 0, 22d 0, 26th .96, and Total 1.77.

TOTAL PRECIPITATION



JUNE 1962

ISOLINES ARE DRAWN THROUGH POINTS OF APPROXIMATELY EQUAL VALUES. HOURLY PRECIPITATION DATA FROM RECORDER STATIONS WILL BE AVAILABLE IN THE PUBLICATION "HOURLY PRECIPITATION DATA."

ASHEVILLE: 1962

TEXAS - JULY 1962

WEATHER SUMMARY

The month of July was wet with below normal temperatures in West and North Texas a hot and dry in the central and southern part of the State. El Paso received ra on 23 days in July. Thunder or distant lightning occurred on 28 days. Amaril received rain on 11 days. Dallas reported the wettest July on record with 8. inches or 439 percent of normal. Little or no rain fell in Central and South Tex during the entire month. No measurable rain fell at Austin, Galveston, Corp Christi, Brownsville, nor Laredo. No rain at the Austin and Galveston airpor established new all-time records for July. Amarillo had accumulated 9.78 inch above normal rainfall for the year 1962, while Beaumont-Port Arthur had fall 16.78 inches below normal.

Temperatures were hot in Central and South Texas with readings of 100 degre common. The average daily maximum of 95.4 degrees at Beaumont-Port Arthur was t highest ever observed in July. Laredo had an average daily maximum of 102.5 d- grees. Temperatures were below normal in North and West Texas due to cloudy a rainy weather.

Some local flooding occurred during the last week of July as torrential showe fell in the area between Mineral Wells and Kaufman. Kaufman received 15.12 inch of rain in a 30-hour period on July 26 and 27.

For detailed information, the reader is referred to STORM DATA and WEEKLY WEATH AND CROP BULLETINS, for July.
